Hey I notice there is a freqs for the TV video(image). Is there a way to get the image from the scanner onto the tv. I realize I won't hear any thing unless I use another scanner for audio.
If I can bring display the image can I route it through my vcr? My tv doesn't have A/V input, but my vcr does, so thats why I ask.
Any input would be nice.

Mattenna.

3283. Re: [SST] Fwd: I Wish You Could Know...

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-14 19:09:18 UTC
From: sxyfirhose@aol.com
Topic: 3279 Message: 3283

I too have done that for 20 years. Retired on a disabliltiy pension. Worked Los Angeles City Fire Dept as a fireman/paramedic. I was in the riots. Worked many high incident areas, South Central LA for 6 years. Prior to LA CITY, worked for the USAF FIRE DEPT. Being a fireman/medic, it is in my blood. Now with 5 major surgeries, 23 injuries and another 2 more surgeries pending, oh well, part of the job. The part I did not bargain for was the WORST pension amount possible for being totally rated as disabled. Than of course, when the 'WIFE' now the EX, when she found out the last injury was to put me off the job, she walked out on me. As I worked for 10 years with several herniated discs in the back and neck (they want to put a morphine pump in my back for the upper and lower back) with extreme pain and many many complications. Total time on that job was aprox 15 years. The EX and the courts took me for everything. Now, I am way down below the poverty level.... Never thought in this time and age this could happen. Oh well, GOD saw it all and one day they must account for all.
To all my fellow brother's and sister's, stay safe, stay low. Protect your back and neck at all costs.
Now, as far as scanning and radio's go.... always intrested in those confangled contraptions!!! lol....
Take care,
Greg T.

From: Rich Barron
Topic: 3287 Message: 3287

****

Contents:

1. New Radios
2. RBASIC
3. XRS Update
4. Mac Radio
5. Universal FSK Decoder
6. New Sonobuoy Receiver
7. Turnkey Monitoring Systems
8. Dayton Hamvention

****

1. NEW RADIOS

The WR-1550 series is being shipped. This is an unpgraded version
of the popular WR-1500 series with better spurious signal rejection,
better sensitivity and better dynamic range. For more details, visit
http://www.winradio.com/home/1550e.htm/ and
http://www.winradio.com/home/1550i.htm/.

The WR-3100 series is also being superseded. The new series is called
WR-3150, and has similar improvements. Small quantities are already
available and new orders for the WR-3100 are being automatically
converted to WR-3150. For more details, visit
http://www.winradio.com/home/3150e.htm/ and
http://www.winradio.com/home/3150i.htm/.

****

2. RBASIC

RBASIC (Radio Basic), the exciting "mystery new software product" we
have been talking about, is undergoing finishing touches. You are welcome
to have a sneak preview at the product's new Web site
http://www.rbasic.com/.
We hope you will find it as exciting as we do!

****

3. XRS Update

For XRS developers, the XRS specification document has been updated.
The new version 1.1 is available for download from
http://xrs.winradio.com/.
This new document includes provisions for the latest XRS "goodies"

such as decoders, making the XRS plug-ins even more flexible.

Many excellent (and mostly free!) XRS plug-ins suitable for all WiNRADiO receivers, are now available for download from http://xrs.winradio.com/.

****

4. Mac Radio

Macintosh and iMac users will be pleased to know that the long-awaited WiNRADiO for Mac is being tested and will be available soon. Sorry it has been taking us longer than we thought - all good things take time! We will
be previewing it on an iMac at our booth at Hamvention, Dayton, Ohio, 19-21 May.

****

5. Universal FSK Decoder

An exciting new product is coming soon, the WiNRADiO Universal FSK Decoder.
This extremely powerful decoder can decode most FSK encoded transmissions.
It also contains various signal intelligence tools useful for analysis of unknown signals.

See a preview at http://www.winradio.com/home/fskdecoder.htm/.

****

6. New Sonobuoy Receiver

A brand new sonobuoy receiver, model WR-2902i, is about to replace the venerable WR-2900i (see http://www.winradio.com/home/sonobuoy.htm).
The benefits are in a greatly increased sensitivity (for both analog and digital modes), and spurious signal rejection.

****

7. Turnkey Monitoring Systems

Our multichannel monitoring systems such as the MS-8006 (see http://www.winradio.com/home/ms8006.htm/) are being integrated with high-performance antennas and antenna distribution units. This powerful system must also be the most cost-effective integrated surveillance system
ever available.

See http://www.winradio.com/home/adu.htm/ and http://www.winradio.com/home/ax12b.htm/.

****

8. Dayton Hamvention

If you happen to be at Dayton Hamvention this weekend, come and see us
at our booth number 554 and 555. We will be delighted to see you there.
(And yes, there will surely be some bargains!)

****

Best wishes until next time,
WiNRADiO Communications

3290. dtmf decoder and mod for pro-2050

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-20 01:41:18 UTC
From: CyBeR ThUg
Topic: 3166 Message: 3290

ok.. i have a pro 2050 from Radio Shack. and i bought this DTMF decoder from www.dschmidt.com, because i want to know what the tones are, but im not sure how to hook it up with the scanner. it has an RS232 connection, a phone line input and a audio input. i tried soldering the audio input to the speaker of the scanner.. but there's an interference that you can hear when they're both on. and it cant decode tones, i have to turn the volume all the way up, just for it to be decoded. and usually, the 1st # that you dial, doesnt appear. i have no idea why this is happening, and where else i can hook it up. i really need evrybody's help.

and one more thing, ive heard that there's a uniden bearcat, that goes with a dtmf decoder that goes into a slot. im not sure if you have to buy it seperately though. if anybody knows where i can get it, or what model it is, pls let me know. thank you so much.

Try searching in the 170-172 mHz range. This even holds true for the wireless mics for the video cameras in the squad cars. I think they are probably all on different freqnencies, but one Irecently saw for the Davenport PD was on 171.045. This also is the range of many of the wireless mics used by performers and studios.

About 12 watts is what mine finall tweaked to swung about 25 ---not sure if
you can get that out of yours but good luck

Greetings,
My name is Gerry Singer, I am the vice president of a non profit organization known as the Weather Awareness Resource Network. Our organizations primary goal is to distribute weather related materials to schools, business' and organizations all over the United States. We are an internet based organization with meetings once a week on the net.
We are supported with materials by F.E.M.A. and the American Red Cross as well as materials and funding from a major insurance company. We are a unique group with members from all over the United States. Being non profit, we are always looking for new members that can assist us in fulfilling out goals.
Please have a look at our web site located at:
http://www.warnorg.com
All materials ordered by members are delivered to your door at no cost to you.
If you feel you can assist us in any way or would like to become a supporting member we would very much appreciate it.
To contact me for further information, please e-mail me at
warnvp@...
I hope this post is not too off topic, but I know a many scanner listeners are interested in weather as well.

Thanks for your time,
Gerry Singer

??? Who uses the Fm & CW bands from 26-32mhz?? This is puzzling me cause I never hear anyone on them....! If I transmit on these will I have large aircraft doing low level fly-bys past my Cavalier??? Also, What freq's do I need to exercise caution transmitting on between 26-32mhz on any band, (with the exception of channel 9)...? Thanks Again ... MAC

There is some business band and military stuff on there. With all of the enforcement the FCC has been doing, I think I'd be a little careful about being hears outside of where I was licensed to operate. A few years ago, you probably wouldn't have had to worry, but now better look over your shoulder if you do it. You know the FCC has the ability to monitor and triangulate any transmission on any frequency using Star Wars Technology from their monitoring post in Gettysburg, PA ?? They can tell within a few feet of where you are. Probably could also get a photo of you and your car or house as well if they wanted to.

Big Brother is out there!!!!

>>On Sunday May 28 MAC writes:Who uses the Fm & CW bands from 26-32mhz?<<
It sounds like you have a modified CB that you want to freeband on. Frequencies 26.03-26.47mhz are for broadcast remote. 26.62mhz is Civil Air Patrol. 26.43-26.53 is for business. 28-29.7mhz is the 10 meter ham band. 30-30.55mhz is military. 30.58-30.64 is Special Industrial Radio Service. 30.66-30.82 is Petroleum-Forest Products-Motor Carrier. 30.84-31.26 is Business-Motor Carrier-Forestry-Conservation. 31.28-31.98 is Forestry Conservation-Special Industrial. 32-33 is military. Riley Hollingsworth,the FCC's top enforcer,has been aggressively going after freebanders using these freq's. The best motto is if you are not licensed for the frequency,don't talk on it or be prepared for a big fine. Instead of freebanding,get a ham license and operate 10 meters. Just because you don't hear anyone on those frequencies it doesn't mean that they aren't being monitored.
Steve

Mac,
AM & FM mode communications is used in the 26 mhz band by commercial tv and radio, for remote broadcasts out in the field on HF, not everything in this area is on 450 and 455 Mhz FM.

26.9 to 27.405 Mhz is the U S Citizens Band.

27.410 to 28.000 Mhz is used by the United States Government agencies such as FBI, Secret Service, CIA, and US Military. Many a day have I heard activity coming out of South America and mexico in this freq spectrum, LSB and AM mode communications in foreign tongues. Was it foreign CBers, or drug trafficers being monitored by US enforcement? (If I value my American freedoms, I would not want to get caught operating in this area of spectrum by the FCC, o r other agencies) (they do monitor this area by satellites, and ground relay stations) I was told this by an FCC official 12 years ago at a radio club talk. OK to listen but dont key the mic!

28.0 to 29.700 Mhz is the 10 meter Amateur radio band. AM, SSB, CW, Digital signals, even FM is found here. You must be a licensed Amatuer (ham opr) in this spectrum to legally operate here. Get caught bootlegging and you will be fined heavily. Sun spot and propagation characteristics affect this band greatly, next year this band will be hot with activity in the 11 year cycle, world wide communications. Get your ham license and join in legally, you'll glad you did. I did 25 years ago, and have worked into

over 125 countries.

29.7 to 30.000 Mhz is used by forestry interests, the guys who cut down the trees. FM is used here with alot of companies. 29.5 to 29.7 Mhz is the Amateur radio FM mode.

30.0 to 32.0 Mhz was used years ago by the US Navy, Army, and other govt agencies, as well as commercial business, and manufacturers.

Your right however this spectrum has been quiet alot of the time, some due to switching to orbiting satellite communications, some to upgrading radio gear and bands for the service and user, and a host of other reasons.

Anyways hope this helps abit Mac, good listening to you.

>Wheelieman<

3321. Re: [SST] FM &CW bands

Topic: 3320 Message: 3321

Mac,

Those seem alot like the usual CB radio frequencies, which you should be able to hear quite alot, espically during the day when the skip is up. Living here on the "left coast", I hear lots of people running non-bearfoot(I.E. way over the 4 watt output at the antenna connection) most of the day. Maybe your receiver or antenna connection is bad. Besides, CB radio these days sucks big time, since it's not regulated like it used to be.....

Brian

3322. Thanks!!

I would like to say thanks to all of those who responded to my post. I had an interest in getting a ez ham license(non-morse code type) a few years ago but never did. Now that I have a Ranger 2950 and have the ability to I guess I should just to be safe.... 2 more Questions... 1) How do repeaters fall into play with my radio or do I need one AND..2) That 11 year skip... When does that start next year? Thanks ALL AGAIN.... MAC

3323. hello

Your best bet is to just go to one of the Canton fire stations and ask.
Most fire companies have no problem giving out the frequencies that they
operate on.

Before I was a firefighter, that's how I got frequencies for my scanner. I
even went so far as to go to the dispatch center itself and ask.

Brian

I have to disagree with you about CB sucking. The operators that I know are very good and professional. CB is a good hobby and is an enjoyable pastime. Sure there are BAD op, but by far more good than bad.

Thanks

Ernie

As much as I hate to tell you to do this, go to your local radio shaft, and buy a copy of Police Call. You want the issue with Ohio and Michigan. Not only does it have the canton FD and PD, but it also is probably the best tool that you can invest in for the monitoring hobby. I use my copy every day.

Shaun,
The city of Canton uses a trunked system, but it's a fairly small one, so even if you don't have a trunktracker you should still be able to follow it, as long as it doesn't get too busy. The freqs are in police call.

David

Hello Everybody:

The first issue of HAM WORLD Magazine will appear in middle August. The mag is distributed via E-mail in Power Point format. It's quite interactive, and will cover the following items(among others): Dxing, Contesting, Low Band operation, VHF, UHF, Microwave; EME, Club News, New Hams, Antennas, Ham Hardware and Software, RACES, QRP, Digital Modes, Tower Safety and maintenance, Repeaters, ads, New products reviews, etc.

Subscription is FREE, yes, you are not dreaming: it's Free!!.
Columnists and contributing editors are well known hams with impressive personal backgrounds.
Our major goal is to develope this project with a world wide point of view in mind, allowing Hams an Organizations from all over the planet to see themselves reflected in this publication.
Take in count we pay for the articles we publish. I'm sure most of you have something interesting to write about and if it is approved and published you'll get paid for it.

Subscribe 100% free by sending an email to: HAM-WORLD-subscribe@egroups.com

IF you want info on how much we pay to ocassional writters send your request to: lw9euj@...

HELLO I AM BALTIMORE CITY FIRE FIGHTER FOR ABOUT TWO MORE WEEKS. I DONT KNOW IF THIS IS THE RIGHT AREA , BUT I AM STARTING A SUPPORT GROUP THAT IN SOME WAY WE COULD HELP US IN THIS DIFFICULT TIME OF BEING PUT OUT OF SERVICE BECAUSE WE GOT INJURIED DO OUR JOBS.
I HAVE 23 YEARS ON THE JOB AND THE CITY WILL NOT PUT ME ANYWHRE IEVEN IN COMMUNICATIONS WERE I WAS ASSIGNED LIGHT DUTY, AND WAS WORKING DURING A HIGHRISE INCIDENT.
THE PEOPLE THAT THEY ARE NOW REPLACING FIRE FIGHTERS WITH HAVE NEVER BEEN IN A FIRE , OUT ON A WET COLD NIGHT FOR 12 HRS, OR HAVE NEVER BEEN ON A MEDIC UNIT.

WELL I COULD GO ON AND ON, I HOPE THERE IS SOME FIREFIGHTERS OUT THERE THAT READ THIS ND MAYBE IN SOME WAY WE CAN HELP EACH OTHER IN DIFFERENT DIRECTIONS TO FIND WORK, ETC OR JUST PLAIN OLD FIRE TALK.

THANKS SEE YA ON THE BIG ONE

first is to make sure you have the proper license to operate it,then the 2nd,is that the frequencies are like this..the input to a repeater is 29560mhz,and the output is 29660...but the problem is that most repeaters are world wide and unless you know alittle about the system,you can actually activate aany ones repeater any where in the world..in fact where i am right now..in du1 land i can hear repeaters in the japan as well as australia,etc..
the sunspot cycle is in full service as we speak,but again the importance of a ham license is important,as the riley's fines are much too stiff to play with..
73's from n6hpx-du1 philippines....i am on the air from here daily from 1200-1600 utc...on 14245 and 14320 mhz..

```
i would also suggest not transmitting on anything
unless you are licensed to do so,as the fcc do issue
very stiff fines even on the out of banders,who think
there not being heard..i know one who got a 10,000 a
few years back..

10 Meter repeaters are very popular and allow great dx, but you need a ham license to use them, but with the license fee of 61/2 bucks for ten years whats the prob.....65 cents a year to have more radio privs than you'll ever use is well worth it. As far as the sun spot cycle your smack in the middle of it right now.

FYI, the "license fee" is to TAKE the exam. The fee covers (well, almost) the expenses that the VOLUNTEERS paid out of thier pockets to help you get a license. There is no fee to renew your license, unless you want to pay W5YI for his "service" (what a scam!)

The only "fee" that the FCC imposes on an Amateur is for a "vanity" callsign. If you do not want a special callsign, then there is no fee.

The options to a "fee" would be;
1) NO special requests for call signs
and
2) Maybe the FCC would visit an area YEARLY if it is out of the mainstream and semi-annualy if it was within the beaten path. OR you had to drive to the regional FCC office - but only on certain days.

Bob

TEXTS

IN THE MATTER OF TELECOMMUNICATIONS RELAY SERVICES AND SPEECH-TO-SPEECH SERVICES FOR INDIVIDUALS WITH HEARING AND SPEECH DISABILITIES. Amended the effective date by which parties must comply with most of the amended rules adopted in the TRS Order. Established a fixed date for the annual submission of complaint log summaries by states and TRS providers to the Commission by July 1 of each year. Rigorously conformed the text of the rules concerning the submission of contact information and the treatment of emergency calls to the precise language in the TRS Order. Clarified requirement regarding the transfer of customer profile information between
outgoing and incoming TRS providers. Clarified the review process and possible disposition of informal complaints under amended TRS rules. Change the nomenclature in rules from "video relay interpreting" to "video
relay services." Corrected various typographical errors that would otherwise be corrected in an erratum. Amended specific rules shown in Appendix A. By Order on Reconsideration. Dkt No.: CC-98-67. Action by the Commission. Adopted: June 2, 2000. (FCC No. 00-200). CCB

BELL ATLANTIC-WEST VIRGINIA'S PETITIONS FOR LIMITED MODIFICATION OF LATA BOUNDARY TO PROVIDE EXPANDED LOCAL CALL SERVICE (ELCS). Granted Bell Atlantic's-West Virginia's request. Action by Chief, Network Services Division, Common Carrier Bureau. Adopted: June 5, 2000. by MO&O. (DA No. 00-1024). CCB

BELL ATLANTIC-WEST VIRGINIA'S PETITIONS FOR LIMITED MODIFICATION OF LATA BOUNDARY TO PROVIDE EXPANDED LOCAL CALLING SERVICE (ELCS). Granted Bell Atlantic-West Virginia's request. Action by Chief, Network Services Division, Common Carrier Bureau. Adopted: June 5, 2000. by MO&O. (DA No. 00-1025). CCB

RCN TELECOM SERVICES OF CALIFORNIA, INC. D/B/A RCN OF CALIFORNIA. Granted the petition to intervene filed by the City and the County of San Francisco, and denied the petition for reconsideration filed by the City and the County of San Francisco. By Order on Reconsideration. Action by

Deputy Chief, Cable Services Bureau. (DA No. 00-1213). CSB

ANCHORAGE, ALASKA. Proposed amending DTV table to substitute Channel 6 for DTV Channel 22 at Anchorage, Alaska. Comments Due: July 27, 2000, Reply Comments Due: August 11, 2000. Dkt No.: MM-00-99. Action by Chief, Video Services Division. Adopted: June 2, 2000. by NPRM. (DA No. 00-1217). MMB

SAN ANTONIO, TEXAS. Proposed amending DTV Table to substitute DTV Channel *8 for DTV Channel *20. Comments Due: July 27, 2000, Reply Comments Due: August 11, 2000. Dkt No.: MM-00-100. Action by Chief, Video Services Division. Adopted: June 2, 2000. by NPRM. (DA No. 00-1218). MMB

THOMASVILLE, GEORGIA. Proposed amending DTV table to substitute DTV Channel 46 for DTV Channel 52. Comments Due: July 27, 2000, Reply Comments Due: August 11, 2000. Dkt No.: MM-00-98. Action by Chief, Video Services Division. Adopted: June 2, 2000. by NPRM. (DA No. 00-1216). MMB

ROADRUNNNER TRANSPORTATION, INC./DYNAMEX OPERATIONS EAST, INC./CITY COURIER, INC./EASTSIDE WESTSIDE, INC. Granted in part, the "Request for Cancellation or Reduction of Proposed Forfeiture" filed jointly on July 6, 1999 by Roadrunner Transportation, Inc., Dynamex Operations East, Inc. City Courier, Inc. and issued monetary forfeitures in the amount of $22,000, $10,000, $4,000, and $4,000 respectively for willful and repeated violations of Section 310(d) of the Communications Act of 1934, as amended. By Forfeiture Order. Action by the Commission. Adopted: May 31, 2000. (FCC No. 00-196). MMB

IN THE MATTER OF AMENDMENT OF SECTION 73.622(B), TABLE OF ALLOTMENTS, DIGITAL TELEVISION BROADCAST STATIONS (RICHMOND, VIRGINIA). Seeking comments on the petition for rule making filed by Central Virginia Educational Telecommunications Corporation, licensee of noncommercial station WCVE-TV, NTSC Channel *23, Richmond, Virginia. CVETC requests the substitution of DTV Channel *42 for its assigned DTV Channel *24. Comments Due: July 27, 2000, Reply Comments Due: August 11, 2000. Dkt No.: MM-00-97. Action by Chief, Video Services Division. Adopted: June 2, 2000. by NPRM. (DA No. 00-1215). MMB

STATE OF TENNESSEE DEPARTMENT OF TRANSPORTATION. Denied Tennessee Department of Transportation's waiver request, and dismissed the associated application. Action by Deputy Chief, Wireless Telecommunications Bureau. Adopted: June 1, 2000. by Order. (DA No. 00-990). WTB

IN THE MATTER OF AMENDMENT OF PARTS 2 AND 87 OF THE COMMISSION RULES TO ACCOMMODATE ADVANCED DIGITAL COMMUNICATIONS IN THE 117.975-137 MHZ BAND AND TO IMPLEMENT FLIGHT INFORMATION SERVICES IN THE 136-137 MHZ BAND. This Errata makes corrections to the Initial Regulatory Flexibility Analysis that appeared as Appendix A of the NPRM in this proceeding, FCC 00-160, which was released on May 15, 2000. By Errata. Dkt No.: WT-00-77. WTB

TEXTS

IN THE MATTER OF IMPLEMENTATION OF THE LOCAL COMPETITION PROVISIONS OF THE TELECOMMUNICATIONS ACT OF 1996. Took three actions to extend and clarify the temporary constraint adopted in the Supplemental Order. Extended and clarified the temporary constraint identified in the Supplemental Order while it compiled adequate record for addressing the legal and policy disputes. Clarified what constitutes a "significant amount of local exchange service," and clarified that the incumbent local exchange carriers (LECs) must allow requesting carriers to self-certify that they are providing a significant amount of local exchange service over combinations of unbundled network elements, and allowed incumbent LECs to subsequently conduct limited audits by an independent third party to verify the carrier's compliance with the significant local usage requirements. By Supplemental Order Clarification. Dkt No.: CC-96-98. Action by the Commission. Adopted: May 19, 2000. (FCC No. 00-183). CCB

Subject: Police Quotes

**** Police Quotes ****

"The handcuffs are tight because they're new. They'll stretch
out after you wear them awhile."

"If you run, you'll only go to jail tired."

"So, you don't know how fast you were going. I guess that
means I can write anything I want on the ticket, huh?"

"Yes sir, you can talk to the shift supervisor, but I don't think
it will help. Oh, did I mention that I am the shift supervisor?"

"Warning! You want a warning? O.K., I'm warning you not to do
that again or I'll give you another ticket."

"The answer to this last question will determine whether you are
drunk or not. Was Mickey Mouse a cat or dog?"

"Yeah, we have a quota. Two more tickets and my wife gets a
toaster oven."

"Life's tough, it's tougher if you're stupid."

"No sir, we don't have quotas anymore. We used to have
quotas, but now we're allowed to write as many tickets as we
want."

"Just how big were those two beers?

"In God we trust, all others are suspects."

From: Jack Ricci
Topic: 3320 Message: 3347

Make it sound good if you want, but some of us know better. The good ops take the test and become real radio operators. For every good CB op, I estimate there are 10,000 others that don't know what an op is.
This is based on past experience. Sorry.
Jack

From: sxyfirhose@aol.com
Topic: 3348 Message: 3348

Hey Bill,
From a fellow disabled fireman/paramedic. I think that is a great idea. Believe it or not, I was thinking along the same lines of what you put in print, some type of support group. I have gotton absolutly ZERO support from the Los Angeles City Fire Dept. I was there aprox. 15 years - FIREMAN/PARAMEDIC. Before that was US Air Force Fire Dept 7 years. I certainly hope other's like us form something or just kick it around as we would at the Fire House kitchen table....
Greg T.

3350. Morning 6/8... Great Skip?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-08 16:27:28 UTC
From: Andrew Koch
Topic: 3350 Message: 3350

Listening to my scanner this morning here in PA on 33.86, I hear a "Station 61" responding to a grass fire... What really struck me as odd was that the dispatcher had a strong southern accent, and that, around here, they are called brush fires :)

So, I was wondering if anyone could tell me where this was coming from...

3357. MPV-32 V

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-10 02:36:11 UTC
From: Walter Jinright
Topic: 3357 Message: 3357

Hi,
Was just letting you all know of a new radio I got. It is the relm
mpv-32v , it does 136 - 174 mhz, 32 channels , with dtmf,scan,
dcs,and 50 pl tones, plus more, and is FIELD PROGRAMMABLE!
I can use it on 2 meters and public saftey bands and receive weather
without retuning. It is awsome.

Walter

I have been hearing vhf dx all week myself, In Pensacola, FL. I have talked on 2 meters as far as Tampa, FL and New Orleans, I think even a Houston repeater gave an ID while I was listening.
Something to do with the Low level and high level "High" that is in the area,

Happy Dxing,
Walter

Quick Question? The rci in my car kept blowing fuses. I thought it was possibly the cigarette socket because i have had a problem with the lighter recently. SO I did a TIM TAYLOR job and rewired it.... Directly to the fuse block with no fuse in line. Because I think I am related to the guy who invented Murphy's law, It started to smoke. Is it possible that NO damage was done to the radio?.... I am hesitant to find out. Could a bad ground have cause the problem? Also I sort of pulled an oops and spliced together 2 different gauge wire, half being a higher gauge than the original power cord. Could that have caused it to smoke? If any internal damage would have occured, could I just replace a resistor or something and fix it? Any info would be helpful... Thanks in advance... MAC

Other things found in this range include in-house transmitters. For example, in museums with RF "tour guides", you pick up a receiver at the desk, and listen to the program all by your lonesome as you walk around. Also, I've seen places that run conferences use this range for foreign language translations. I found one of these places in Seattle, and ended up paying $10 for a surplus receiver so I could scan elsewhere while listening to the program!

What exactly started to SMOKE? the cable, the radio? If it was the cable, you have a problem in the wiring (gee, kinda obivious huh).
Something caused a SHORT. There is normally a 3A diode across the power connection - INSIDE the radio. This was intended to blow the FUSE if it were wired backwards. I have had to replace many a protection fuse for CB'ers that could not read instructions or were color blind (red is Positive, black is Negative). I have never seen one of these diode short all by itself, but this is an imperfect world and shxxx STUFF happens. Using a LARGER wire gauge is GOOD, smaller is BAD. When I ran big VHF and UHF amps in the truck, I ran two #4 cables for the positive and two #4 cables for the negative (doubled up, I could pull huge current -- to the point where I could melt cheap PL-259's if I had high SWR).

If you found smoke rolling out of the speaker holes, then you have a bigger problem. I would suggest (IF YOU FEEL COMPETENT ENOUGH TO DO THIS) - open the radio, check for obivious shorts, burnt boards, resistors, transistors that have comitted suicide (blow thier brains out)... check the protection diode - see if it is shorted. You will need to lift one leg and measure with a DVM. If the diode is good, PUT A FUSE BACK IN ___BOTH___ LINES -- the Positive AND Negative and connect to a power supply.

Trouble shooting tip: You can use a high current lamp (head light?) in series with the radio being tested. IF there is a SHORT, the lamp will

light, if there is no short, the lamp will just act as a current limiter.
Next time, use a fuse! A burning wire can cause a LOT of damage.

Good luck. remember that electronics IS smoke. Once you let the smoke out,
the circuit won't work anymore.

Bob

one may never know what is on this band unless one
sits and listens,and it may be surprising to hear or
not hear anything..but i believe the 74 mhz area is
suppose to be remote control planes,cars,etc..

The Smoke was coming from the Radio. AND today i found out the hard way that I guess I toasted a $250 radio. I pulled it out and hooked it to the battery and it didnt come on. What usually goes inside when this happens? Is it as easy as running to Radio shaft and buying a new transistor and replacing it? Thanks.... MAC

Love Scott, Shelly, Courtney & Ryan

Thanks Rifleman... It was actually the Radio that was smoking. It was only for a couple of seconds before i disconnected it but I'm sure it was long enough to do damage. When I Find this protection Diode... I would desolder one leg and check it with a volt meter, right? Would that be the first thing to go and would it stop anything else from frying? WELL... Thanks for all your help... MAC

With all the replies I have seen on this subject one thing has not been mentioned and that is the TV sound and video for channels 4,5 & 6.
Audio frequencies are
ch 4 = 71.7500Mhz
ch 5 = 81.7500Mhz
ch 6 = 87.7500Mhz
Note however that these are all Wide Band FM and may sound distorted on your Narrow Band FM scanner

Bob

From: J W
Topic: 3378 Message: 3378

Well, if you are near FT Carson, you should be able to hear some from the mil post.. cause the SINGARS run from 30MHZ to 87.975MHz..
and if they are not run in a CT (Cifer Text Mode) the only way you can run hear is PT (Plain Text mode) wich is un-secure.

If you are near the area, and you are monitoring a FREQ in that range. You may hear mSec bursts... this is cause by FREQ HOP... (changing Freqs simo with the reciving end. Part of SECURE MODE about 100 Freq/sec.)

I can not tell you anymore about this.

the protection diode is NORMALLY connected directly across the DC
connection. On the "newer" radios that do not have a detachable DC
connection, the diode should be off by its self very close to the DC
connection. It is normally a 3A diode and should stick about 1/4 above the
board - this why, when the diode fries, it does not burn the board too bad.

Check the diode with an OHM meter... you are looking for SHORTS. Remember,
it is NORMAL for a diode to show short in one direction, but open in the
other (be cause this is a DIODE JUNCTION - conducts in only one direction)..
you need to lift one leg of the diode so that nothing else in the circuit
gives you a faulse reading.

Good luck!

3382. ICOM America Website Updates

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-16 19:14:29 UTC
From: Rich Barron
Topic: 3382 Message: 3382

ICOM America's recently added a few useful features to its Website that hams are sure to like: new U.S. amateur band charts and a U.S. grid square map that includes Alaska and Hawaii. Both are offered in downloadable PDF format. We've also added more information on the very popular IC-756PRO and, just for fun, a cool Work the Magic screen saver.

The U.S. band plan features a nice, easy to follow layout of the VHF/UHF and HF amateur bands. On the back is info on country prefixes, Amsat satellites,and band plan frequency assignments. See it now:

http://www.icomamerica.com/amateur/band_charts/bandchar.pdf

The U.S. grid square map offers the best looking amateur map ever! Alaska and Hawaii are included. Additional information on how to use the chart and when the major contesting dates occur each year is printed, too.

http://www.icomamerica.com/amateur/band_charts/usgridsq.pdf

For the IC-756PRO there's now a presentation on what makes this radio such a breakthrough in amateur radio technology. The presentation may be viewed directly in most browsers, or may be downloaded for viewing in PowerPoint(R) program or on a PowerPoint Reader. Take the tour!

http://www.icomamerica.com/amateur/hf/756propresentation.htm

Afterwards, take a walk on the tech side by reading up on a IC-756PRO Advanced Operating Guide written by Icom America's chief engineer. It's a downloadable Word(R) document.

http://www.icomamerica.com/amateur/hf/IC-756PRO.doc

And just for fun, we've put a cool new screen saver up for anyone to download. Work the Magic. Amateur radio IS like magic.

http://www.icomamerica.com/amateur/magic.html

Look for a massive redesign of our Website over the next few weeks. We'll be offering more features and information than ever!

ATTENTION NEW U.S. GENERAL CLASS HAMS! Did you notice that ICOM America is offering a special $25 savings on its new IC-718? If you are new to the HF bands, this easy to use rig offers some big rig features that can help make that jump an easy one. Link today for details:

http://www.icomamerica.com/specials/amateur

LAST CHANCE ON SOME GREAT SAVINGS. Time is running out on some valuable ICOM America special savings. Save $200 on the super-popular IC-746 HF/6M/2M base rig, and save $30 on the equally-popular IC-2800H dual band mobile rig. Link for details:

http://www.icomamerica.com/specials/amateur

Have a great field day, and we'll see you soon on our new Website!

73 de ICOM America

I noticed that my friend, Bob, provided some useful information. I am surprised that he did not, also, explain the theory. In Japan, where transistor devices were enhanced and mass produced, a modification was made to the original bell labs design. It was given a japanese name that I can't recall. However, what was discovered and implemented by the Japanese was the electrical characteristics of smoke. They found by compressing a finite amount of smoke into each component would result in the device functioning more efficiently, lower power consumption and for a longer period. The only real drawback to the Japanese design is the fact that once the smoke is released, the device ceases to function and assumes the role of paperweight and or door stop. Just in case you were thinking about it, you should know that the Japanese have total control of the process and they will not allow us to reinsert smoke to effect repair on their devices. They have made it so difficult, that the only practical solution is to purchase a new part and install it in your device. Hope this clears up any questions.

3386. WV State Police

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-17 04:09:16 UTC
From: brown82@marshall.edu
Topic: 3363 Message: 3386

With all my experience in deciphering radio puzzles, I hate to come to the conclusion that I have failed. I'm trying to figure out what kind of radio system the WV state police are using that makes it so hard to get mobile units. Dispatch is on 42 MHz, but mobile units have the following antennas mounted on them (standard): 1/4th wave 42 MHz whip, 72 MHz, 155 MHz, 460 MHz, 800 Mhz. I'm starting to think they have the military style band hopping radios. I talked to several people who work with WVSP and they are VERY tight lipped about their new radios. I've checked FCC and the only freqs they have are for the dispatch and for a control channel, along with a few mobiles, so I assume the new freqs and system type are unpublished. Can anyone give me more info?

3387. Schematic for a lnb

I believe the name given was KAMIKAZE... as in kamikaze electronics, everything works fine until it self-distructs, and goes down in flames.

73 OM,
Bob

hey, when are you going to pay the six bucks and change and get your General License???

Topic: 3389 Message: 3389

what do they have on 72MHz???? This is for wireless mics and some in-plant pagers... all LOW POWER stuff.

Have you checked into the 800MHz stuff... is is TRUNKED? The 42MHz stuff is most likely statewide comms between districts, the 155MHz stuff is most likely within the PD district and the 460 MHz stuff is most likely portables for point to point and mobile repeaters... but the 800 MHz stuff may be trunked and the system looks for open channels and spread the channel loading around.

They may have gone MDT for dispatch and then you only here replies from the cops in the field.

Why don't you stop at the next Denny's when you see a troopers car in the parking lot and look inside the car?? get a look at the control heads and then search some of the pages on the internet for info on the radio attached to the control head??

Since - in the real world - most governmental agencies only buy Motorola or GE, it should be easy to determine the radio type.

Bob

running to the local radio shaft to get parts, well, if you are
semi-insane -- YES, if you are sane, there are better, cheaper, parts
houses -- Digi-Key, MCM Electronics, Parts Express, etc.

Open the radio and fix it your self, YES, only if you feel that you can. Can
you read a schematic? can you solder (without destroying the circuit board:)
do you know the difference between rosin core and acid core solder?

Since it is a pretty good forgone conclusion that the radio is toast, you
really cant screw it up any worse, but if it is salvageable, send it to a
repair shop -- Copper.com should have a list of links to CB shops -- maybe
even AES will reapir it - I am 99% sure that they sold them too.

Good luck.

Bob

Hi,
You may have inadvertantly , crossed a wire or in other words, burnt out a protection diode that keeps you from frying the radio, If you know what you are doing, it can be fixed in 5 minutes for less than 10 cents, if not it will cost you 20 to 50 bucks to fix that little mistake.

Walter

Back in @1972 - 73 I worked for an Electronics Wholesale/Retail Jobber
called Zentronics in Toronto Ontario.
One day a lady came up to the counter:

LADY:I want one of the brown cylender shaped things with the wires
coming out the ends and the coloured stripes on it.
ME: Do you mean a resistor?
LADY: Ya if thats what you call them.
ME: OK Do you know the value you want?
LADY: As cheap as possible!
ME: No I mean the value of the resistance?
LADY: (Just looks puzzled)
ME: Do you know the colour of the stripes you need?
LADY: Maybe I better get someone to wait on me that knows what they
are doing!
ME: Miss I assure you I know what Im doing. There are hundreds of
colour combinations of those stripes and each one means a different
value or amount of resistance.
LADY: Ill get my husband to come in and look after this I dont
know....lady left.

SO as you see it takes ALL kinds

Bob

brown82@...,
The Mississippi HP uses a system that sounds very similar to what you are talking about, with the only exception being the lack of 800 MHz capability. They use 42.08 MHz as the dispatch frequency, which explains the 40-50 MHz 1/4 wave antenna. They have a 150-160 MHz antenna as well; this is attached to a mobile "docking" station for their portable radios. While they are in their car, their portable radio serves as a VHF High Band Mobile Radio (County Sheriff's Department) uses this frequency range). When they are out of their cars, such as on a traffic stop, their portable goes with them. Inside the trunk of their cars is an old GE (Master II, I think) that is dual band (VHF Low/High) and is set up for cross-band repeat. What this amounts to is that depending on how their portable is configured, whenever it keys up, it transmits to the car, which then re-transmits the traffic back to dispatch via 42.30 MHz. At other times, it may re-transmit on other frequencies, such as their private car-car simplex channel, the car-car repeater, etc. Each patrol car has a separate high band (150 MHz) frequency and PL tone that activates its crossband repeater. While the troopers are in their cars, they simply bypass the high band side of the radio and transmit directly on the low band side (42 MHz). As for the 450 MHz antenna, this is probably for interagency cooperation; the City of Meridian is on UHF, and several troopers have a UHF radio in their cars, especially the shift commanders. You mentioned that this is uniform in your area; apparantly, the West Virginia State Police has a larger budget than the Mississippi Highway Patrol, but that really isn't surprising.
Finally, (this is only a theory) the Alabama State Police is currently in the process of switching from VHF High Band to 800 MHz trunked system, in order to better communicate statewide. As part of this process, they are using the trunking units for car-car traffic and limited car-base traffic, but dispatch traffic is going to continue on 150 MHz until all (hypothetically) of the bugs are worked out of the system. Hope this helps; email privately with any questions. RW - KD5GCK

Topic: 3364 Message: 3403

Well Even though I believe my little mishap has gone on way too long, I'll add some fuel to the fire(pun intended) I opened this thing up(fire bottle in hand of course) and discovered that on the side with the solder there is a piece of the copper that i guess is part of the trace or track thats burnt and missing. To better elaborate, The part of the board that is green and I guess acts as the "road" for the current is open about 1/8 of an inch. HERES MY QUESTION..... READY??.... Can i just drop a piece of solder on that to bridge them and then check the diodes and resistors? OR do I use the radio as a book end? AND.... If i can "bridge" them, What type of solder is recommended? I KNOW THE BOOK END IDEA SEEMS PRETTY GOOD RIGHT ABOUT NOW. THANKS PEOPLE! RESPECTFULLY.... MAC

Topic: 3401 Message: 3405

KY has one of the more interesting systems that I've heard about. All of their towers are microwave linked, so a trooper can instantly raise any unit in the state by entering the appropriate pl tone code. Or so I've heard.

3406. Re: [SST] Help

From: brown82@marshall.edu
Topic: 3399 Message: 3406

The only ones that exist right now are: a switch to make the backlight stay on forever, or until the battery runs down, whichever happens first; a mod to make the annoying "low battery beep" go away; and a mod to provide better input to decoding devices, such as touch tones and pager decoders. Look them up under the pro-90, they are the same thing with less memory, or the bc 240xlt or something (bc ???xlt).

The cop cars equipped with lowjack directional antennas have four quarter wave antennas in a box pattern on the roof of the squad car. It shows them what direction the signal is comming from without having to rotate a directional antenna. Operates at something around 160 MHz if I remember correctly.

Tom,
You are listening to image frequencies on your scanner. Your scanner has a lousy front end which cannot distinguish between the proper cell frequencies (about 870 mhz to 895 mhz) and the phoney ones you're finding between 850 mhz and 875 mhz (or 868.9375 in your case because that's the top end of that band on your scanner). That's actually good for you because it's a cheap way of accidentally experimenting with cell frequencies without putting up the bucks for a real scanner with triple conversion technology. What you will find is that you can only hear the local cell sites and not the distant ones, because only the local sites are strong enough to interfere or intermod onto your overloading scanner on the wrong frequencies, (unless you drive your portable scanner to a distant cell site and put it in search mode there). You will also notice that you will hear what appears to be more than one service or conversation using the same frequency simultaneously. That's because your scanner might pickup your local road repair crew on 855 mhz (if you had one there), and also a cell image on the same 855 mhz (which is actually a cell image transmitting on 876.4 mhz from a local cell site).
I had one of those scanners as my first about 9 years ago because it was offered to me at 1/2 price and I liked what I thought it could do. I started to realize what was going on when the American scanner laws changed and our Canadian Radio Shack stores carried the same scanners as the U.S. Shacks did, and we found that the new scanners in 1994 wouldn't pick up cell on the same frequencies that the old units were picking them up on!
That's when some of us looked up exactly on what frequencies cell sites rebroadcast cell phones on and we realized we were listening to them on the wrong frequencies all along. No one was able to explain that phenomenon to us at the time, so we had to figure out the mystery for ourselves.
Jack

Do Radio Shack stores in Canada sell scanners identical to the units sold in the US? What I mean is, will a scanner model "whatever" that sells in both Canada and US have cellular frequencies unblocked on the Canadian model?

3417. Frequencies for The Hilton Valley Forge Hotel (King of Prussia, PA)

Topic: 3417 Message: 3417

Anyone have any frequencies for The Hilton Valley Forge Hotel in King of Prussia, PA?

How about general Hilton freq.'s?

The question is a good, valid one, and the proper answer is " no ".
The Canadian Radio Shack stores used to have different part numbers for similar scanners to allow for our then DOC (Department of Communications) standards approval of product coming into Canada, but according to what I've been seeing for sale recently on the newsgroups and swapgroups, all Radio Shack scanners on either side seem to have the same part number, and none of them are able to intercept cell calls, except for the odd image that breaks through occasionally, especially on the poorer and cheaper of the Shack scanners. Our DOC in Canada used to be the DOT (Department of Transportation). It has presently been renamed Industry Canada, so I have no idea what the official approval name will be on the Radio Shack scanners sold in Canada, but they won't be promoting units that pick up cell calls, because it would be a conflict of interest on their part. All our Radio Shack stores in Canada sell cell phones and service. Go figure.
Jack

while I do not know for sure, my immediate guess would be they are the SAME as the models sold in the US. Radio Shack has a history of being WIMPS... they were the first to BLOCK cell phone frequencies, they sold thier cell phone customers on the mistaken belief that Radio Shack cell phones and cordless phones were "private".

Well, today I was sitting around really bored (that is when I get my strangest ideas). My scanner, which is hooked up to a computer, a 2042 with an optocom 535 board is in my shack, when I am sitting in another room I can hear the scanner, but am not sure which channel it is on, and sometimes with the TV on can't really make out what is being said...sound familiar? Anyways, I have a Dish Network satellite system, the back of the unit has two inputs, one for the satellite dish and one for the off air roof mounted antenna. Since I subscribe to the local channels on the sat system there was nothing plugged into the off air antenna port. I had an old video camera, one of the types that you had to carry around the VCR slung over your shoulder. I hooked up the camera to the antenna input and aimed it at the computer monitor and hooked up an old mike to the audio input and put it in front of the speaker. Now here is the cool part! If I hear something on the scanner, I turn off the satellite receiver with the remote, and the receiver reverts to the off air antenna input and I can both see and hear what the scanner is doing on all the TV's in my house. Is that cool or what! OK, so I'm a full fledged geek, I admit it. Now just need to figure out how to control the computer from another room....IR with a wireless keyboard?...well that is for another boring day.
Gerry

First off I think you will find that Canadian and US catalog numbers are ALMOST the same except Canadian numbers tend to have an extra digit in them ie XXX-0XXX. The 0 being the extra digit.
Also as for the cell phone thing, MOST of the Radio Shack stuff comes in through the US and not directly into Canada. And since it is illegal to import cell capable scanners into the US they are blocked. The same goes for Uniden and others in the US. However you can usually bye Uniden and other scanners from Radioworld or Durham UNBLOCKED, because they are imported directly into Canada.
I have heard Radio Shack employees tell customers that their cordless phones can not be monitored as it was illegal to do. In one case it was one of the new 2.4Ghz models. I believe those are also digital and can not be scanned. I spoke to the manager about it and advised him that some of the employees where giving a failse impression. I explained to him that monitoring cordless phones OR cell phones was NOT illegal in Canada. Since I have a bit of a personal reputation at this particular store he said he would speak to the employees about it. (I have been phoned several times at home and asked questions that customers want answered and the employees couldnt answer re Scanners, Shortwave, CB and Ham Radio.)

From: Moe Magnum
Topic: 3425 Message: 3425

Hi everyone, I just found this group last night. I have two scanners; a Radio Shack Pro 50 (old), and a Uniden BC60XLT-1.
Someone just gave me the Pro 50, but I need some help with it. I figured out how to program it, but now I cannot un-program it or change any of the frequencies. How do I do it? Also, the button for the number 0 has this on it:"0/MON". When you set it to manual (on any frequency) and push that button, MON appears above the frequency display and the frequency reads:"150.355" (even if the frequency is something else) What is "MON" used for? One last question for this scanner, how sensitive is this unit to voltage differences? I mean can I run it off of the 12-14.4V of my truck? It is a nine volt unit.
Is there any upgrades/tricks for either of these units? Thank you, and I look forward to being part of this group,
MoeMagnum

3426. Mobile antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-26 07:50:49 UTC
From: brown82@marshall.edu
Topic: 2433 Message: 3426

Every so often, someone is asking what kind of antenna to get. Well, I just got ahold of a Midland dual band mobile antenna (144MHz and 440MHz) with something like 3dB gain on VHF and 4dB gain on UHF. I've just used it for my scanner (and most of the things in my neck of the woods are on VHF-HIGH and UHF). I just can't say enough about it. Mounted on my trunk, it works VERY CLOSE to the performance of my discone mounted 20ft above my roof! I'm getting police action on VHF from 50 miles away. Not 50 miles over level ground, but rather through 50 miles of rolling hills that are about 1000 ft tall. I'm talking about driving on the highway in the valleys. On the hills, I've picked up weak VHF from ~100 miles away. If anyone's curious, I could get the numbers from it. And (boo-hoo), radioshaft doesn't carry it, at least not around here (surprising, huh?). Cost me about 40$ for all the stuff after a small discount, and boy I'm glad I tried it. I love it.

Yep. In regards to last few messages, it reminds me of radioshaft's new policy. Piss on the radio enthusiasts whose business built them from the ground up. When it comes to the quick buck, they sure were happy to abandon us for the their quick spending cell phone yuppies. Forget about going to bat for us in D.C. when congress was making our rights illegal. Out with the old customers and in with the new. It might be good corporate business, but it sure is dirty. Yeah, just sell 'em a satellite system and a cell phone and let them be dumb, happy, and eat cake!

Radio shack buy's it products as a block for the
entire corporation. Also, company stores can make
product transfers between stores without paying
tarifs evan if there in different countries.
(it's considered a transfer between branches as
long as it's under a certain volume, you can
check the laws yourself if you don't believe me).
That would make it almost imposible for canadian
radio shacks to carry unblocked scanners. Plus,
if they where, it would be a heck of alot easier
to unblock them.

consider this, your discone is unity gain (ZERO GAIN) while the dual band
antenna exhibits 3db gain, also on your base you have feed line losses,
mobile the feed line is , what, 15 feet??

try this,
go to the FCC site, www.fcc.gov and search on TOWER ID. You will get a page back that has downloadable files of FCC tower registration as well as FAA tower registration (different .zip files) I thought about downloading them, but I did not want to take the time. "r_tower.zip" is over 10MB!

MON means that you can save a scanned frequency temporarly in memory if your scanning for new channels(I have a PRO-39-works the same way). If you want to save a given frequency in MON, then just pick a free channel in your scanner and put it in. As far as using your 12 volt battery system in your truck, you might need a step-down converter to use your scanner. What kind of batteries do you use? I use nickel-metal-hydridie's in mine, so I never need to use the "ciggie" lighter. By the way, welcome to the group, you'll find some great ideas from reading all the various e-mails from everyone.

3434. (radio question) new to group

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-27 15:06:16 UTC
From: brown82@marshall.edu
Topic: 3425 Message: 3434

Your radio will work on the 12 volt system, but it will likely shorten it's life considerably. It may have a voltage regulator in it, but at 14.4 volts (voltage while the engine is running), it would run really hot and burn out quickly. If it is not voltage regulated, you would likely burn something up straight away. Also, on your pro 50, if you'd like to erase all the channels, turn it on while holding the 2 and the 9 buttons in. If you want to erase one channel, just press program, 0, and press enter. If the channel doesn't automatically lock out, no would be a good time to lock it out.

Well let me tell you something about what you
just said. Whose fault is it that there is no
longer any money in radio. (as you claim, i don't
see that as the case) Everyone want's a scanner
with all the bells and toys but they also want
them dirt cheep. Name one business that would
sacrifice profit for "loyalty" when the customers
there supposed to be loyal to arn't loyal to
them? Besides, theese things are alway's
changing. It goes in cycles and all businesses
adapt to whats hot in the market at the time.
Right now it's cell phones and Direct tv. Soon it
could roll back to CB's and scanners!! And still,
where do you go when you need adapters in a
hurry?

I currently have a Antennex Scanner antenna on my pickup for my scanner and i have troubles recieving 20 miles away and i am extremly interested . does this ant. you talk about have a NMO mount like a buisness band.??? where i can unscrew my scanner ant and but a dual band ant. up there?

our Police run on 800s and i would like to try it and see if it works.

I would like some numbers from the ant. and maybe a place where i could buy one

Thanks
RILEY FRAZEE

Just find out your lattitude and longitude (easiest way is with a GPS) and search for all towers within 1 mile from that point using the FCC general menu query for lattitude and longitude at this location:
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/lat_long.hts
I have no idea what the number means, it might just be a number that the corporation uses to identify it's tower.

> is there a way to find out what an antenna tower is for if you have it's fcc
> id? there is a huge tower behind my house, and the id posted on it is

This receiver was only used once, although an
excellent receiver it just was not conducive to auto
racing (scanning) environment. This receiver covers
0.5 MHz-1300 MHz. FM, WFM, AM, USB, LSB, CW, SSB
(Cellular blocked). Features include 1000 memory
channels, Noise blanker, Lock, Sleep timer, Auto
Frequency Control (AFC), Memory search function, Auto
mode, Tuning step function
This Unit comes with hand strap, antenna, belt clip,
wall charger, Ni-Cads, & manual.
I will include the Cloning software with computer
cable that I punched with this unit.
I still have all original packaging and warranty
registration card. Receiver is in full working order
and only has 12 hours of time on it.
I paid $375 for everything late April 2000,
Make reasonable offer to vwinkeler@...
Thanks
Vince

the lat/lon lookup worked perfectly...i just went to www.mapblast.com and put in my address and got the lat long of that, and since the tower's right behind my house, i just did a search for a 1 mile radius and found it fine. thanks a lot.

Topic: 3441 Message: 3441

Hi again. I just got three (half)rolls of Co-ax from the cablecompany. Is this acceptable to use for the feed to antennas? If so,does it matter how long it is? Or is there a mathematical formula tothat? Speaking of mathematical formulas; could someone please refreshmy memory on how to make a dipole used for just one frequency? (1/4wave or something like that, cant remember exactly) Is there a way Ican create a good (or a couple and use a switching system) all aroundantenna? I know I can buy them, but I would rather make them. BTW,the antennas (if possible to make) will be built for home and auto(?)usage. Thanks again,Moe

This freq. is used by the ANG based at Ft. Custer just west of Battle Creek, Mi. flying A10's It is a kind of catch all freq. you can hear pilots talking to maintenance and armors even on the ground. It all goes through a reapeater and comes in strong at my 20 about 15 miles away. Very busy frequency
Watch your 6,
Jim Smith

No, don't do that... Use a piece of solder braid/ solder wick and tack it at each end of the burnt trace... The reason is that the solder bridge will break. When it breaks, you will have a bad solder joint (fractured solder and most likely, a torn piece of copper trace). While Solder Wick is what most tech type use, you can also use plain old wire -- a short piece of #20/22 ga phone wire works nicely... Be careful that you do not create more problems by getting too close to other traces.

GO to radio shack and buy a small spool of solder, use the smallest diameter solder you can find. Use a solder pencil -- unless you are very skilled at soldering, I would not use a Weller "welder" (model 500/550 etc - you gotta be good to use a welder :) 35watt pencil is good and hot and it too may be a bit much, 25 watt is better - especially on small gauge solder. Use rosin core solder -- you are not a plumber...

Hey, you can't screw it up any worse, right?

Besides, if it doesnt work, you can always sell it on eBay (SWAT BOB with a 2x4 for that last remark:)
or use it for a wheel chock or a door stop, or a book end, or donate it to a local Ham Club - someone there would love to repair a 10m radio.

If all else failed, you have learned a valueable lesson, Electronics is SMOKE.

Bob

If you are GOOD enough, you can do it. Art-work. I used to be able to do it when I was good a soldering. I butchered a bunch of them before I got good at it. Better to take a small piece of wire and bridge the gap, and drop a piece of solder on each end, tin both ends, then "touch the ends up" when the wire is lying on the runs.

Good luck.

Coax cable from cable tv companies will most likely be 75 ohm... not too bad... If you have the hard line cable all the better, if it is just run-of-the-mill CATV coax -- RG-6, RG-59 or RG-11, it is not really worth messing with (dollar for dollar, 50 Ohm feed line is "better")... but if it is 3/4 inch or LARGER hard line, then it is worth the effort. Now while it is not 50 Ohm cable, it works just fine... intread of a 1 to 1 SWR, you will have a ---- tada --- 1.5 to 1 SWR... Now I do not know about you, but I can live with a 1.5-1 SWR (I can live with a 2.0 to 1 SWR too!!).

Consider this, SWR is reflected power. If you need to run 500 feet of CATV hard line, and even if you did have 2:1 swr, your transmitter will never know it. With the loss going up, then the reflected coming back, your TX won't see the refelected power.

I know of a repeater club that uses .75 inch CATV with runs of 900 feet or more, and have done so for YEARS.

If you are only receiving, then there is absolutly no reason why you cannot use the smaller feedline. I do not have the specs at hand, but go to Belden's web page and I would bet that RG-6 has less loss than RG-58.. sounds good to me! If you are using RG-6, put F-56 connectors on it and then inter-series connectors to your favorite (BNC/UHF/Phono etc) that fits your receiver.

Dipoles are 468/f

or
300,000,000/f(Hertz) = full wave (in METERS) divide by 4 for 1/4 wave(M). 1/4wave each side less end effect. I forget the % of end effect -- it has been a long time since I put together a dipole.

Oh yea, almost forget...

Multi-band antenna. Again, is this to transmit on or just receive?

You can use different wave lenght antennas from the same feed point. If you separate the antennas with coax, keep in mind that they need to be IN PHASE or you will get odd patterns (can you say BEAM/YAGI antenna?).

3455. Re: [SST] SMOKE??

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-06-30 01:32:11 UTC
From: Jack Ricci
Topic: 3364 Message: 3455

Not yet Mac! That copper foil probably fried because you reversed the polarity on the power leads to the radio, and the diode protector shorted and probably fried) in an attempt to blow the safety fuse, instead of frying your circuit board. You must have bypassed the fuse or put an oversized one in its' place, maybe because it seemed handy at the time. So next best thing to fry in an attempt to protect, was the circuit board foil. You have to replace the diode first and be careful not to install it bass-ackwards. Look for the silver colored band painted on one end and face the new one the same way if it is of the same type.Which one is it? It'll be the small black one near the burnt foil and power cables which are soldered to the board....it may be cracked and stink, and it'll probably be covered or surrounded in silver-colored, molten, solder-type hardened material which oosed out. Care to know how I found this out?

Wouldn't suggest the PCR100 as a scanner - it sucks as a scanner - you can scan faster manually. The PCR100 is a great communications receiver with a scan function tacked on as an afterthought.

Attention all HAM RADIO OPERATORS!

Have you ever wished the manufacturers would listen to your
requests????

Well here is your chance! ICOM America, Inc has announced a ham
survey:

http://www.icomamerica.com/amateur/survey.html

ICOM America, Inc. is asking for your input regarding your operating
habits, gear, station and other items.

Donít have an ICOM, no problem; we just want to hear from you.

Remember haste make waste, the site will be live for only 10 days.

73 de ICOM America
http://www.icomamerica.com
ICOM Radios. Simply the Best.

3463. Fwd: ACTIVITIES FROM C9

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-01 18:19:10 UTC
From: Rich Barron
Topic: 3463 Message: 3463

Hi gang,

I just got this e-mail and thought that those of you with radio related companies may be interested in a sponsorship opportunity. All I know about this is what follows:

Rich Barron

---snip--

My name is Martín Monsalvo I'm 27 Y/O, I am an active contesters, and member of Team Argentina for the WRTC.
I will activate Mozambique C9 for 20 days Including the CQ WW DX CW and ARRL TEN METER CONTEST.
Outside contests I will focus in the low bands to provide many an all time new one.
In the CQ WW DX CW I'll do my best to set a new world record on 28Mhz. I got a 25 acres lot outside of Maputo. The ten meter antenna system is being constructed, it consist of a 5/5/5/5 yagi stack, plus 3 3el fixed yagis.
Considering the good results achieved by ZS6EZ last year with modest antennas, I believe I've got a chance.
I'm looking for Sponsors, and I really wish Icom America to be my HF equipment supplier.
I only ask for a good HF rig such as the IC775 DSP. In exchange I can offer full advertisement of your porducts in The QSLs, in The Expedition Web Site, and in the Magazine Articles.

My recent contest efforts include:

AZ4F CQ WW WPX CW 1994 7 Mhz. World First place , South American Record.
ZP0Y CQ WW DX CW 1994 21 Mhz. World First place .
LU1IV CQ WW WPX CW 1996 7 Mhz. World First Place , World Record.
LU1IV CQ WW DX CW 1996 7Mhz. LP World First Place, World Record.
LU1IV CQ WW WPX CW 1997 7Mhz. World First Place, World Record.

Please let me know if I can count on you.

From: Bob
Topic: 3466 Message: 3468

As much as it PAINS me to say this, have you tried the Radio Shaft?? Also, not owning a TH-215, I do not know this, that is the reason for the question.... Are you SURE the current rating in 2.4AMP HOUR??? Thats a hefty current at 7.2v!! Are you trying to run your electric RC car motor on the HT's battery pack??

2400mA = 2.4A

Perhaps it is 400mA??

Inquiring minds gotta know.

73,
Bob

i know the law about having a scanner in your car.
but lets say i wanna bring my scanner to my freinds for the night
or i am moving or say i am going on vacation, IF the scanner is
"n-transport" what is the legal way if any to carry my scaner.
Im sure their must be some cops on this list that can answer this question.
thanks mike

You can get a permit to carry the scanner or if you have a ham radio
license tech or higher you are exempt from the law. Otherwise it must be
inaccesable to occupants in the car. Call your local police for an
application to have a scanner in your car....
Good luck.....

From: jsn
Topic: 3470 Message: 3471

Real simple. If you dont mean to use it while you are driving then turn it off and keep it in the back seat in a bag or something. Dont make it look like you are trying to hide it cause an officer wont be happy. My best advice is if you live in michigan and you wanna listen to your scanner either a) get a permit (not hard) or b) get a ham license. a ham license covers you pretty much nationwide

Jeff

3472. Re: [SST] Kenwood TH-215A

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-05 01:17:39 UTC
From: rileyf@ria.net
Topic: 3466 Message: 3472

My th-215a has a sticker on the back of the radio and on the back of the Battery
the battery sticker says WC-0351-KNB4 7.2V@2400mAh
Rapid Charge nickel cadium battery and on the back of the radio the stikcer says

Rating DC 8.4 Volt

If that helps you any.

Thanks
again.

From: Robby Workman
Topic: 3474 Message: 3474

If anyone is interested in a Radio Shack PRO-2050,
there is one listed on eBay. Go to:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=372151030

If that link does not work, you can do the search
function and enter the item number - 372151030

3475. pro-2037 mods' and freq's wanted

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-05 22:32:18 UTC
From: RANDY LECLAIRE
Topic: 3475 Message: 3475

I am looking for any mods' for the radio shack
pro-2037 200 ch base scanner. Is there anything that
can be done simple with this radio. (Cell is legal in
Canada where I am).

Also looking for a spot to find frequencies for the
area around Brooklyn, Michigan. For when I go to
NASCAR in August. POLICE, FIRE, AMBULANCE (YOU KNOW
WHAT I MEAN.

And no I don't need the NASCAR FREQ'S (I have them)

there is just another way of this and thats to ask
about it,question any officer around and see if its
legal to carry a scanner..i did in virginia,and they
said its not illegal to carry or have one...but make
sure of this before you do...

3484. pocsag decoding

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-06 20:33:59 UTC
From: mrhappy0@aol.com
Topic: 3484 Message: 3484

Looking to learn how to understand POCSAG decoding. What are the pager freqs, and anyone have a link or name of a windoze program that'll decode (freeware)?

thanks
mrhappy

just about all scanners can listen to ham,military
and the sorts,but it depends where you wanna to
listen and what kind of scanner you want.the 200 mhz
areas are usually the beginner spot for military
bands,and the ham freqs are mixed in so many
spots..just let me know what bands you wanna listen...

3490. Re: [SST] pocsag decoding

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-11 16:59:39 UTC
From: Andrew Koch
Topic: 3487 Message: 3490

The frequencies are everywhere...

Just scan around in the 100, 400, 800 and 900 MHz bands, and you are SURE to find some good strong pager signals!

Andrew Koch

3492. Re: [SST] michiagn scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-12 13:24:13 UTC
From: kb8rmx@juno.com
Topic: 3470 Message: 3492

You're right Larry, in Michigan there is a third way to carry a scanner in your car besides the two way I mentioned, the third way is to be a sworn police officer, in this case you must pass the certification by the state and be hirred by a police agency (not a security gaurd company) and have your id with you when carrying the scanner. Having done this, and having my ham ticket also I think the easiest route is to get the ham license, plus the doors it opens to the radio world are limited only by ones mind. Hope to catch you on the air one day.....73's

3495. SST.com to be featured in Ohio Radio Show!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-13 08:04:36 UTC
From: Rich Barron
Topic: 3495 Message: 3495

Scott Sloan from NewsRadio 1370 WSPD in Toledo, Ohio will be interviewing Rich Barron this Friday (tomorrow) afternoon at around 5:10 about scanners and scanner tricks. If you're in the area, please tune in.

If you have any good tricks to bring up, good Ohio specific scanning info, or other tidbits, please pass them on to Rich at richard.barron@... and he may just use them on the air.

Right now the SST.com links page only has two Ohio specific scanning pages. If you know of any more to add - do it now and get your hits before the rush starts!

3496. Pro-90 Scanner Mods

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-13 20:33:38 UTC
From: quadster1104@aol.com
Topic: 3496 Message: 3496

Does anyone know if there are any mods for the Pro-90 scanner?

3497. Re: [SST] SST.com to be featured in Ohio Radio Show!

From: Andrew Koch
Topic: 3495 Message: 3497

Why don't you record the show and post an MP3 file in the files section of
the groups page on e-groups...

I for one would love to hear this, but am no where near Toledo :)

3504. Michigan Scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-14 20:29:43 UTC
From: Don Cheek
Topic: 3504 Message: 3504

Want to carry a scanner in your vehicle?
Join your local volunteer fire department, they can always use the help.
I not only have the scanner installed, I have 16 channels of 2-way on 150-160Mhz.

fireman@...

3505. Motorola KDT 480 MDT

Yahoo group: stupidscannertricks (1998 — 2000)

Don, nice blanket statement but NOT true. I've tried in my local area
and since i live outside the village limits, they are not
interested(even though they cover my area), I've even volunteered to
handle as a first responder and was turned down.

I'm a ham so i'm covered but not every volunteer FD is interested.

3510. Stupid Radio Disk Jockey Tricks

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-15 03:03:40 UTC
From: Rich Barron
Topic: 3510 Message: 3510

Thanks to an astute reader, I narrowly averted disaster today by not doing the radio interview.

Apparently, Scott Sloan of NewsRadio 1370 WSPD, Toledo, OH is a "shock jock" with a shady past and likes to stir up debates, get people in no-win situations on the air, etc and has been doing something of a privacy week this past week. Since SST.com had a handful of cell/cordless phone tricks, I think that was the spin he was going to put on the whole site. He wasn't interested in scanners as much as blasting people for listening to cordless/cellular phones with them. Something SST has never condoned, yet is still a popular draw to the scanner newbies.

So to avoid a sticky situation, I referred him, via e-mail, to some of the fine Radio Shack employees in the greater Toledo area, plus a few local toledo websites that were listed in the SST.com Stupid Scanner links. I also replaced the cell and cordless tricks with cell and cordless privacy tips just in case he were to flame the site without me being there.

I was kind of curious to hear the show and to see what it was all about, but couldn't tune in from two time zones away. :) I really don't think we would have gotten much of a mention, but more of a slam in the few minutes of his three hour show (which follows Rush Limbaugh to give you a sense of the type of "News" station they are).

Call me a wimp, call me a coward, but today I also found out that USAToday linked to SST.com last month! Nifty!!

If anyone happened to tune in, please give us a little run down about the show.

Thanks!

Rich Barron

Dick, Try this link http://w5gb.nmsu.edu /kc5kto/mods/pro2036vdcell.txt (http://w5gb.nmsu.edu/kc5kto/mods/pro2036vdcell.txt) . It is a virtual down conversion, but you can still receive the full 800 band by doing this mod. Good luck, Chris

3527. Trains

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-07-25 14:18:21 UTC
From: Andrew Perley
Topic: 3527 Message: 3527

Hey.
Is there any way to find out where the nearest train is and when it will be stopping cars on my scanner?
I always get stuck by them, every day, and they come at a different time.

I tried the link on the posting for the pro 2036, its not found any ideas? I own a 2036 myself,help!
------Original Message------

Dick, Try this link http://w5gb.nmsu.edu/kc5kto/mods/pro2036vdcell.txt . It is a virtual down conversion, but you
can still receive the full 800 band by doing this mod. Good luck, Chris

Train tracks have mile markers just like highways. Sometimes, the
engineers will give their location on a track. Just scan the rail band

on 160.215-161.565 15kHz separation and listen. What may seem
like random times is actually a very complex schedule. If you don't
know what mile marker is where, a place to start is at a crossing,
but don't fart around there. I saw a person's leg and arm "detached"
by a train. Very unpleasant. Anyway. There is usually a sign that
says:
"Report stalled vehicles or other emergencies to 1-800-chu-choo.
Please give this information: 12.2 Coaltown. NECRR."
The number is the mile marker. If you get really interested, I guess
you could plot them on a map.

From: sxyfirhose@aol.com
Topic: 3537 Message: 3537

Hello out there to all,
I was given a Realistic PRO- 30 Model # 20-131. I have no manual for it although it was pretty straightforward to use and program. I wish others were as simple in some ways.
I was wondering if there are any MODS for this scanner? If anyone knows, please enlighten me.
One other problem is the scanner will not hold any of the frequencies plugged into it. The unit must stay on or I lose everything. I have changed the cell batteries along with AA batteries in it to no avail. Once turned off, WIPED OUT!!
Thanks to all in advance,
Greg

Hello all I am after some help on looking for mods for a 2 Meter
Handheld Transceiver it is a MAXON HR-146
if anybody can help me I would be greatly appreciated

Also I have an Alinco DJ-X10E handheld scanner just wondering if
there are any mods for that unit yet

Thanks in advance

3548. 235XLT ?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-14 13:59:36 UTC
From: Judy
Topic: 3548 Message: 3548

Does anybody know how to perform, or where to find the information
for making the light on the 235 come on when someone keys up like the
245XLT ?

Judy

3549. BC9000XLT

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-15 00:14:24 UTC
From: sigley@gci.net
Topic: 3549 Message: 3549

Does anybody know any up-to-date scanner keypad tricks for the bc9000xlt, bc3000xlt i have ole ones. Or is there any neat tricks for converting higher frequecies into lowwer ones. Without purchasing any other equipment? Also what good antenna i could use in the house for better reception on my base unit?

3550. 235XLT ?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-14 15:25:18 UTC
From: Judy
Topic: 3548 Message: 3550

Does anybody know how to or where to get info on the light modification?
So that it will come on every time someone keys up just like on the 245.

Judy

EUROPEAN TELECOMMUNICATION SATELLITE ORGANIZATION. Added the European Telecommunications Satellite Organization's ETELSAT II-F2 satellite, located at the 12.5 Degree W.L. orbit location, to the "Permitted Space Station List" to streamline the process by which foreign-licensed satellites can access the U.S. market, and as a result, stimulate competition in the United States to provide consumers more alternatives in
choosing communications providers and services, reduce prices, and facilitate technological innovation. As a result most U.S. earth station operators will be able to transmit to the EUTELSAT II F2 satellite in the 14.0 - 14.5 GHz band without modifying their licenses. Action by Chief, Satellite and Radiocommunication Division, International Bureau. Adopted:
August 10, 2000. by Order. (DA No. 00-1741). IB

I need some help with a cobra 29 wx st. I have it currently hooked directly to my battery and i have a oil filled antenna. when i turn the key on there is some static and i have to turn the squelch up to cancel it out then when i start the pickup I have to turn the squelch up some more and when i get going down the road i have to turn it up the faster i go the stronger it gets i have tried new antennas and i have tried a different radio and diffent electrical wire i have also put on a noise elimenator and an antenna noise elimentator and neither helped with my squelch turned up when i am going down the highway i can hardly talk 1/4 of a mile and that is pathetic.
my pickup is a 99 ford f-150 if that helps or matters ..

thanks for your time and help

Noise: random signals that carry no information and serve to only interfere with function.
I figured I might as well reply to the whole group because I had some weird stuff. I had some similar problems with a CB. Computer controlled cars are especially notorious for generating hash. In a Cadillac I used to have, I could tune to CH 23 while the motor was running and listen to the Engine Control computer "think" (which made it impossible to use CH 23). OK, here's what to do. Start simple. Separate your CB from the truck's electrical system. Not by using any special $29.95 power line filters (which can actually contribute to noise in some instances), but with a separate battery. Take all precations you normally would with a car battery (explosive fumes, glasses, acid on upholstry). Leave everything exactly as it is, but disconnect your power leads RIGHT AT THE CB and connect them to the other battery. Now start the truck and see if the noise is still present. If it's gone, your problem is in the trucks electrical system, so you can carry an extra battery around or if that's not practical, make your own filter by soldering a heavy duty diode on the red wire (with the minus sign facing the radio) and then soldering a large (4700uF) 20 volt capacitor across the power leads (-side to black, other side to red) somewhere between the radio and the place you put the diode.
If that didn't cure your ills, you are likely picking up ignition noise. Check for loose or bad plug wires. Try to eliminate all unnecessary items (they all introduce loss and pick up more noise). Try a 102" whip antenna fed directly from your CB with 18 ft of RG-8/U. Be sure to properly ground the chassis of your radio to your vehicle (neg ground). Don't forget two things.
a-In the daytime, there will be LOTS of noise on the CB. This is skip interference and there is nothing to do about it.
b-Your radio may be defective and may be exceptionally proned to pick up noise

sounds like ignition noise... if it is a WHINE that changes pitch as you drive it could be ALTENATOR whine, if it is a ticking, pulse noise, it is SPARKPLUG.

To fix it, I would highly suggest you buy the ARRL Handbook or a good HAM RADIO book on mobile radio installation.
Check for the noise with the antenna disconnected! this will help locating the source (is it coming in the antenna or power?)
DO NOT RELY ON THE COAX BRAID FOR ANTENNA GROUND!

With that said, the Altenator whine can be cured with filters, a couple good sized capacitors across the output will provide a good filter. A better filter would be a large value CHOKE in series with the DC lead to the radio. This can be a real trade off, a large value choke will add resistance, resistance will drop the voltage, but since a CB is not a big current draw, a 2 or 3 Henry choke would work nice, especially if wired in a pi network with a .1 uf cap parallel to a 450 uf on the input and output.

If it is spark noise, check ALL grounds, you may need to ground the muffler to the frame, use resistor plugs, check for a cracked distibutor cap (gee, do they still use them ? :) Check your antenna ground, make sure you have a good ground from the radio to the antenna -- DO NOT RELY ON THE COAX BRAID! DO NOT RELY ON THE COAX BRAID! DO NOT RELY ON THE COAX BRAID! DO NOT RELY ON THE COAX BRAID! (did I make that clear? DO NOT RELY ON THE COAX BRAID!)...

Good luck! I used to have a Dodge truck and it took me weeks to finally get the noise out of it... I had about .25volts AC on the DC line... I finally found that I had one diode in the diode stack that would breakdown under heavy load (well, I was running 6 100w halogen off road lights and 100w HF radio, 50w v/uhf radio and a 140A altenator that was made for an amblance - not for my year truck). To fix my problem I had to use an oscilloscope and smack ground points with a 3lb sledge -- just to see if the noise went away or got worse.

Good luck!! noise hunting is always fun.

Bob

Your right a 1\4 of a mile is sad.now the answer to your problem is realy quite simple,first you'll need what's known as a condenser,formely used in old point type ignitionsand attach it in such a way that any and all alt. noise will be taken care of. then you may want to get resister type plugs and wires, that should take care of the rest of the noise for you.along with a very good ground connection. have fun and enjoy. if you don't know how to install the condenser have a Ford mechanic do it for you.that way if something should go wrong you have an out. Know what I mean?

Topic: 3566 Message: 3566

Hello, Can anyone could help me locate some of the following frequencies for the Anchorage Alaska area. I've tried both the fcc frequecy search site, and the percon frequency search site. They will not list the specific law enforcement agency/fire/ems/foresrty that the frequencys belong too. I need the frequencies for police, fire, ems, state troopers, security companies,etc.

Thanks-A-Million

Greg.

I would like to invite eveyone to a new group I have
just started and will hopefully take off.

This group is for posting interesting links to web
sites that has live scanner audio that everyone can
listen to around the world.

I am sure everyone is aware of policescanner.com you
get the picture here.

If you have any other email groups that you know would
like to invite to this group please forward the
following address to them

Anyhow the egroup is
http://www.egroups.com/group/livescanneraudio

I hope everyone should enjoy this.

Subject: Bluetooth: Next Big Wave in Electronics?

Bluetooth: Next Big Wave in Electronics?

Companies Scramble to Use the Radio Technology to Link Computers, Gadgets

By KAREN ALEXANDER, LA Times Staff Writer

In the white-hot quest for the next big thing in personal electronics, the word on the lips of technology executives these days is "Bluetooth."

This soon-to-be-introduced wireless technology uses simple shortwave radio links to allow devices such as laptop computers, cell phones, personal digital assistants such as Palm, cameras and printers to communicate with one another over short distances.

As all these devices have surged in popularity, the tangled webs of wires and cables around desks have become an increasing frustration for consumers
and manufacturers. Bluetooth has the potential to make most of those wires disappear, and with its promise of low-cost and nearly universal compatibility, big-name consumer electronics and chip makers are clambering
aboard.

With Bluetooth radio connections, individuals will be able to form their own personal networks, using as many as eight electronic devices within about 33 feet of one another to exchange schedules and address book information, compete at video games, print documents, trade business cards or even access the Internet without plugging in.

Industry giants such as Nokia Corp., Intel Corp., Qualcomm Inc., Microsoft Corp., Ericsson Mobile Communications, Motorola Inc., IBM Corp. and Toshiba
Corp. are all readying Bluetooth devices.

One of the first gadgets is a wireless headset by Ericsson that links to a cell phone, expected to be ready for the holiday shopping season. The headset has a Bluetooth chip, so it can communicate with an Ericsson cell phone, enabling users to talk hands-free while driving or to walk around the kitchen and slice a pizza while staying in touch.

The other early products will be add-ons for existing devices, such as Bluetooth attachments that can establish radio connections to computers, hand-held data assistants and cell phones.

Motorola, Intel and IBM will soon offer PC cards and port accessories so that old laptops, printers and hand-held data assistants can have a new Bluetooth link, enabling them to share files without plugging in. The IBM PC card, expected by October, will cost under $200, the company said.

"Early Bluetooth products are more expensive. They will come down in price substantially over time," said Howard Dulany, marketing manager for wireless products at IBM.

IBM and Toshiba also plan to offer Bluetooth in upcoming computer models. Some of IBM's ThinkPad laptop computers will come with built-in Bluetooth technology by early next year.

Already more than 1,600 companies are developing devices and applications for Bluetooth, which was named for 10th century Danish King Harald Bluetooth, best known for uniting Denmark with Norway.

The Bluetooth communications standard is being promoted by a consortium of firms, including Ericsson, Nokia, Intel, Toshiba and IBM. To encourage its widespread adoption, it is available free to any company that wants to try to develop products or software that utilize it. And because Bluetooth operates in an unregulated part of the radio spectrum, there are virtually no government authorities to reckon with.

As with most new technologies, the value of Bluetooth will increase as it becomes more widely used. By 2005, about 1.4 billion Bluetooth products will be shipped, predicts market research firm Cahners In-Stat Group.

"It's a great concept, and everyone in the wireless industry is waiting . . . to find it in commercial products," said Alan Reiter of consulting firm Wireless Internet & Mobile Computing in Chevy Chase, Md. "But technologists are often overly optimistic about how fast they can create products. If you want inter-operability, you have to get everyone in the room to agree" to use it.

Southland Firms Buy Into Technology

Still, the potential demand for Bluetooth devices has spurred Southern California companies to pay top dollar for entree into the Bluetooth market.

Chip maker Conexant Systems Inc. of Newport Beach paid about $117 million in April for Bluetooth developer Philsar Semiconductor Inc. of Ontario, Canada. And rival Broadcom Corp. quickly followed suit. In May and June, the Irvine maker of high-speed communications chips paid more than $1 billion for two companies, Pivotal Technologies Corp. of Pasadena and Innovent Systems Inc. of El Segundo, which develop Bluetooth

semiconductors
and software.

"Bluetooth cuts across a number of different market segments that are going
to be increasingly important to people," said Broadcom Chief Executive Henry Nicholas III. "We see it as an extremely important means of distributing broadband throughout the home."

After Broadcom's second deal was announced, Nicholas boasted that Broadcom now had the largest engineering work force dedicated to Bluetooth in the world, nearly 100 people in all.

But it's a tiny British start-up with 15 engineers, Cambridge Silicon Radio, that analysts say has captured the lead in bringing the simplest, low-cost Bluetooth chip to market. The company, in which Intel is an investor, is the first to offer Bluetooth on a single silicon chip, although Broadcom says it is fast on its way to delivering a similar solution.

Conexant, on the other hand, is dealing in Bluetooth chips that use more expensive technology but consume less power--an important concern in battery-operated devices that can quickly run out of juice.

Bluetooth enthusiasts envision within a few years that the technology will be so commonplace that consumers could walk their laptop by an Internet terminal at the airport and beam their e-mail to the office between flights. Or aim their Palm or mobile phone at a vending machine and charge a soda to a credit card without fishing for cash; flirt with someone at the
grocery store by launching a telephone number straight into his or her cell
phone; shoot photos with a Bluetooth-enabled digital camera and e-mail the pictures directly to their grandma via a laptop. Or drive a car on any toll
road in the country, and with a Bluetooth chip embedded in the car, there will be no need to stop to pay tolls; the bill will simply show up on a credit card statement.

As for security concerns, different levels of protection will be available for Bluetooth communications, from simple passwords to sophisticated encryption software. Each Bluetooth device will have a unique address, so material won't be sent inadvertently to the wrong recipient. And Bluetooth signals change frequency 1,600 times a second, making them difficult to intercept.

Current Bluetooth applications are capable of moving data at about 723 kilobits per second, more than 10 times the speed of the fastest telephone modem but not as fast as digital subscriber lines and high-speed cable modems. Those speeds are expected to improve over time.

Analysts Say Cost Is Key

Of course, other wireless technologies are already on the market, and some are able to carry considerably more data over much greater distances than 33 feet.

But the key to Bluetooth, analysts say, will be its low cost. Within the next few years, Bluetooth chips are expected to wholesale for $5 a piece, which will make the technology feasible for a wide range of applications. In these early days, though, the chips are going for more than twice that price.

Yet even as companies scramble to take a bite out of this emerging market, some experts believe that the industry's appetite for Bluetooth is overblown.

"The technology can't be everything it's hyped up to be. The expectations are all out of proportion," said Thomas Lee, an engineering professor at Stanford University who specializes in wireless technology.

Not until prices are low enough that people start putting the technology into "foolish things" will its promise be realized--somewhere between 50 cents and a dollar a chip, Lee said.

Another possible hang-up is the potential for wireless mischief that Bluetooth presents. Lee says he's not so worried that personal information will be stolen; that can be safeguarded with software and encryption technologies. The problem, he says, is that a high school tech geek will be
able to figure out how to jam all the Bluetooth signals within range, bringing the wireless love-in to a frustrating halt.

"Wireless links are much more susceptible to that kind of mischief" than the wired world, Lee said.

* * *

UNWIRED in a wired world

The up-and-coming wireless technology Bluetooth uses shortwave radio to link electronic devices usually connected by wires. More than 1,600 technology companies--including nearly all of the industry giants--have committed to the low-cost, universal Bluetooth standard. The first devices are expected to be on the market by the end of the year.

WHAT IS BLUETOOTH?

A group of high-tech companies has agreed to use Bluetooth, a chip technology that allows devices such as cell phones, laptop computers and personal digital assistants, to communicate over a single radio frequency.

It's really cool how much that article DIDN'T say. I'm sort of interested, but that article left me unfulfilled. They left out all the important specifications. It's a shame that the media automatically assumes that no one knows anything about how anything works (unless they are a "teenage geek," as they said in the article) and they have to condescend to the general population like kindergartners. Boy, I have news for them. Listen folks. Keep your scanners on. Scan the bands. Learn a little something about technology AND what really happens on the streets. Avoid being told "the way it is" by a talking head. This may be construed as paranoid (or naive) by some, but... Believe HALF of what you SEE (on TV and in the newspaper) and ALL of what you HEAR! (on the scanner, where life never sees the cutting room floor).

3583. 49 MHz receiving gear

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-29 20:37:06 UTC
From: JEFFREY MICHAEL KENYON
Topic: 3583 Message: 3583

Hello to all on the list. I just subscribed to this list a few weeks ago and have a question about improving reception on 49 MHz. I am particularly interested in the low powered decices on this band and am currently using a teliscopic antenna on my BC0235. I wsas just wonodering if there was something better out there that I could be using, but I am kind of limited right now when it comes to putting anything outside as I am in a dorm and don't think that the school would like anything big outside. Any help would be appreciated, and thanks in advance.

3585. Re: [SST] please help

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-27 05:21:13 UTC
From: scottmac1025@aol.com
Topic: 3577 Message: 3585

here is how it goes... as far as I know. hope this helps.
29.0-29.7 mhz ~10 meter Ham band
29.7-50.0 mhz~low Band(cordless phones, baby monitors, some police&fire activity, and I believe ham repeaters.)
50.0-54.0 mhz~6 meter Ham Band
108-137 mhz~Aircraft communications(tower, etc)
137-144 mhz~military band
144-148 mhz~2 meter Ham band
148-174 mhz~High Band
174-406 mhz~I dont receive these Freq's but I do know taht some are aircraft communications(especially Military) Nasa, Govt, and I believe that some audio for cable Tv fall in here too around 300mhz or so)
406-420 mhz~Federal Gov't stuff
420-450 mhz~70cm ham band
450-470 mhz~Uhf Band(Police & Fire andI think tv audio)
470-512 mhz ~T Band(I do believe these are mostly tv audio)
512-806 mhz~ I dont know about this one either, I cant tune these in.
806-956 mhz- 800 band(900 mhz Cordless phones, some cell phones tv audio)
956-and up I believe is some of the new cordless phones and I think some police... Could be wrong.

hope this helps. later MAC

3586. Re: [SST] please help

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-27 15:08:28 UTC
From: kb8rmx@juno.com
Topic: 3577 Message: 3586

Bands are frequency groups as measured by their wave length in meters,
for instance frequencies in the 10 meter ham band (28mhz to 29,700mhz)
have a wavelength of about 10 meters or just under 40 feet. This comes in
very handy when customising antennas' for a particular frequency. To
find the band of a particular frequency, divide 300,000,000 by the
frequency in hertz. 29 mhz = 29,000,000hz
Good luck.....

3587. Re: [SST] please help

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-08-27 19:31:27 UTC
From: quadster1104@aol.com
Topic: 3577 Message: 3587

Here are the bands and Frequency ranges

Lo : 29 - 54 MHz
Aircraft : 108 - 137 MHz
Military : 137 - 144 MHz
Ham : 144 - 148 MHz
Hi : 148 - 174 MHz
Federal : 406 - 420 MHz
Ham : 420 - 450 MHz
UHF : 450 - 470 MHz
TV : 470 - 512 MHz
800MHz : 806 - 956 MHz

It is sefl explanitory
ex. If you want to listen to TV broadcasts you go to that band and listen,
etc.

First ha ha, sorry
That is a discontinued radio scanner from Radio shack that scanner now
costs about $19.95-$40.00 and a good deal. That scanner is ok for police scanning.

BANDS are frequency typed bands
It is usually named as police band, fire band, EMS band, etc

HOPE THIS HELPS!

I recommend you to get a Yaesu VR500, or Icom IC-R10, or Uniden 245XLT Trunked Tracker III
.

These scanners are very good in the scanner market

VR500-$300.00 and up

Icom IC-R10-$300.00 and up

Uniden 245 XLT-$200.00 and up

Try a Sangean ANT-60 Portable Shortwave Reel Antenna (long wire on a portable reel with clip-on to telescopic antennae). Hang it facing any direction in your bedroom if you don't share the room with irritable partners!
Radio Scrap sells a cheap quality copy-cat unit.

Well, to be honest with ya, I was running a K-40 cb antenna on my truck with a bnc-2-female cb coax adapter on my handheld. Suprisingly, My reception was great. 49mhz isnt too far off from 11 meters. If interested n that approach and have maybe an airconditioner in your window, you could use a magnet mount antenna or maybe off your fridge. may sound strange but it worked for me. Hope I helped. later mac

Something better for 49MHz reception:
Amateur radio antenna for 6 meter band (50-53 MHz)
Homemade antenna--scrounge some copper wire from a construction/remodeling site dumpster (there's usually plenty), and make your own tuned antenna, with the appropriate (BNC?) connector for your radio. Sorry, I'm not familiar with your model, so I can't recommend a connector. Radio City, http://www.radioinc.com/, sells antennas, and books on making your own. Call and ask for Maline--she knows the bookshelves and suppliers better than anyone.

Hi

For 49 Mhz or any others frequencys,the best antenna I have is a marine antenna.

The one they use for marine Radio.
i was using my 11,10, and 2 meters,antennas,but do not did a good job.

My marine antenna is the best.

Please,excuse my english.

One antenna that you can build that would work great is this... Before I go on, I must say that purists will cry in dismay, but hey, you are in a dorm and this is EXACTLY what you need. An antenna that can be built in 5 minutes and removed in 5 seconds. Procure 14 ft of thin copper wire, cut it into 3 equal sections. Procure a short (maybe 5-10 ft) piece of RG-58 with a BNC connector at the end (Just ask around in the physics or chemistry department and they'll probably give you an old one that you can cut up. Hey, that would be a good place to get the copper wire also). Now, strip the end of the cable and solder one of the copper wires to the center conductor (once agin, if you don't have a soldering iron, ask the physics lab guy to solder it for you). Then, solder the other 2 wires to the shield. Tape the center wire vertically to your wall, and tape the other two wires horizontally, like you made an upside down "T". Now plug in your scanner and listen to the good signals rolling in. This will accomplish the following things: you will get acquainted with folks at your school, you will learn about antennas, and you will have an antenna that you can roll up and take anywhere. Note: This antenna can be hidden very easily. It is close enough 50 ohms at 49 MHz that you could transmit with it without problems (and if you can transmit OK, you'll have no problem picking up with it). It's like a ground plane missing some radials, so it picks up a TINY BIT better in some directions than others, but I'm sure it will bring in lot's of chicks talking about stuff that would make ME turn pink. Just be nice and keep it to yourself. Nobody likes a punk

Does anyone know if Radio Shack would have this kind of antennatwith a BNC connector and how good is it with a 235? The reason why I ask is because I've tried larger antennas on those scanners and they cause problems with the BNC connector. Especially my Pro060.

Has anyone tried an antenna from those devices that would be modified with
a BNC connector?

I have a BC-235 trunktracker, and maybe I'll try that out. On a portable
how far should I expect to get with any of these modifications with
antennas?

there are some energitic hams who have been known to
chop 11 meter cb whips down to 108 inches,which is
about as exact as you can get to 6 meters,and are
right next to 49 mhz,n6hpx,near japan...

From: scottmac1025@aol.com
Topic: 3604 Message: 3604

I acquired and Uniden SC-150B handheld scanner. Works great and has pretty good band coverage. It worked great until my little girl got her hands on it and yanked the power cord out. Out with the cord came the little metal positive contact that sits way inside it. It snapped right off inside.
My question is where can I get that power receptical for the radio?
It gets solder right to the board. I've alreay ripped apart every little electronic piece of scrap that I have laying around my basement. NO LUCK!
ANY HELP WOULD BE GREAT!

ALSO ANY MODS FOR THIS RADIO? (besides getting it to work!)

Love Scott, Shelly, Courtney & Ryan

From: Allyn Taylor
Topic: 3608 Message: 3608

Your receiving range in the 49MHz range will be largely a function of transmitter power and interference--cordless phones, for example, can transmit to your stock handheld whip about 3-4 blocks, clear sight. Trees, power lines, walls can all absorb/reflect/distort the signal. An advanced antenna will be more sensitive, allowing for greater distance between transmitter and receiver.
Caveat: be careful what you listen to--you might not like what you hear.

3614. Uniden SC200 backup program

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-09-07 20:33:43 UTC
From: ianradio@hotmail.com
Topic: 3614 Message: 3614

I have written a little DOS program (it works in a DOS box under
Win95) to back up and restore the memory contents of a Uniden SC200
Sportcat scanner. It cannot be used for programming or operating the
scanner from the PC, it can only be used to backup a memory image and
restore it again. I use it a lot because I am always either hitting
the wrong button and wiping frequencies out or trying unusual things
with the scanner and it is nice to be able to put all of my
frequencies back when I blow them away.

The program is free and, as this list does not seem to have a place
you can upload files to, you can either email me for it
(ianradio@...) or join the "SC200" egroups discussion list
and
download it from the files section of that group.

if it was just the plug that goes into the wall you can get an old extension cord cut the plug off it and take your cord to your radio and uncover the copper wire inside and tape the ends togeather and it would last for a while but to make it last a little longer you could use wire nuts

Topic: 3617 Message: 3617

I just activated the files section for the group. It is at the e-mail group website at: http://www.egroups.com/group/stupidscannertricks Choose the Files link on the left side of the screen. Files need to be sent to me first and then I can put them in the files area. I'd have a totally open files area, but then any net kiddie could stop by and wipe out the files on a whim.

You may have to sign up for a free egroups account to get your e-mail/password combo. That will allow you to log in and go to the members area. It's a fairly short form and should only take you a couple minutes if you're slow.

Other features available after you sign up are:

- A chat area
- An on-line database (create your own links)
- An on-line poll that you can use to poll the whole e-mail list
- Searchable message archives
- And more...

Sign up, stop by http://www.egroups.com/group/stupidscannertricks and see what you've been missing.

Yep. Schools are like police states. No wonder there has been a huge decline
in innovation and success. After all, the values that high school is teaching
are conformism, socialism, agnostic spirituality, and contempt for individuality. Hey, doesn't that sound like Adolf Hitler and his pleasant little
NAZI Europe? No wonder modern schools have become the breading ground
for low morale and deadly grudges that have resulted in several Columbine-
style roving massacres. So you want to monitor the people monitoring you?
AMEN! You're on the right track. It might get you into trouble and label you
(by the ILLEGAL practice of "profiling") as a possible no-good-doer, but it
will build your character. OK, here's the meat... School security is always
on the business bands, either in the 150MHz range, or the 460MHz range.
Most of the time, they are on the 460MHz band. Search from 460-470
and see what you find. If you're sneaky as snake doo-doo (like I was in
high school), you can follow security around with a frequency counter and
pounce as soon as they key up. Yes, when I was in high school, I violated
the rule against any electronic devices by carrying and using a scanner to
listen to police and security. Yes, I wore a dark blue trenchcoat to conceal
my scanner. No, I wasn't a bad kid. I always avoided fights. I got good
grades because a few good teachers fought a lot of bad administrators on
my behalf. Thank god I graduated before Columbine, else I'd never have
graduated because of constant harassment from administrators that didn't
want kids to learn and succeed in chemistry because they were afraid
we'd put something like di(p-dioxydiphenyl)phthalide in their coffee.

Hi you might also want to keep in mind that some high schools like the one that I graduated from are under the thought or belief that they don't have to get licensed by the FCC because they are using such low powered radios. The frequency that my high school used just before I graduated was 467.900 and they used Radio Shack Business radios. That may change with the Grosse Pointes going to a trunked radio system but for now this is what they are on. Since I graduated th number of radios has increased to include some teachers and classroom aides. The staff do quite a lot of messing around on it.
The other thing is is that many school districts have implimented trunked radio systems.

Hey there again. Our School in Walsh Colorado uses those FRS radios that anyone can bye. i just thought I'd let you know that they arent only using business bands. however they do sometimes here is the Walsh Public School Band Plan.

860.0875}
859.0875}
858.0875}Trunked 800's
857.0875}Buses and a few handhelds
856.0875}
855.0875}

151.625} track meet Radio used to talk to the press box.
49.830 } Football Coaches to Spotters.

FRS Radios.
they have began to trunk them.
they are on ch. 3 one day 12 the next and 6
the next day so .

administrators are using these in the building. the principle. the superentindant and the super. office have one and the high school office and some times maintanance wear them they are using Radio Shack Trancievers.

Thanks for the Time.

Riley Frazee
keep up the good advice.

Once you have found the freq's your looking for,
can i suggest publishing them in the school news
papper handing out listings. When I did, the
powers that be rewarded me with a nice two week
vacation. The only good part was that they tried
having me arrested the the cop just laughed at
them. It was worth it just for that.

3623. 48 MHz crystal

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-09-13 01:28:42 UTC
From: JEFFREY MICHAEL KENYON
Topic: 3623 Message: 3623

Good evening listers. I have here an old 49.860 walkie-talkie crystal out of a children's toy walkie-talkie. After having someone read the frequency it is 49.860 and from what I can gather I think that it may be able to fit one old scanner that I have which is a regency four channel crystal. My question is is do I need to do some changes to the scanner's crystals itself? The scanner has four crystals that are all set for VHF highband frequencies and were set up that way a long time ago by my grandfather.Also, further away from these crystals is a separate crystal. and what I'm wondering is do I need to make changes to this radio because of the crystals? This is a four channel crystal scanner with the sliding switches and the four yellow channel indicator lights. Any help would be appreciated, and thanks in advance.

3624. Interesting Yahoo! Auction: Sony Web TV Classic INT-W100 NOT A SPAM

Yahoo group: stupidscannertricks (1998 — 2000)

You're invited by randy leclaire to check out: Sony Web TV Classic INT-W100 at Yahoo! Auctions:

http://page.auctions.yahoo.com/auction/40081349

randy leclaire writes:

I have this item for sale on Yahoo! Auctions, and thought that you might be interested.

I am interested in getting a 100 or 200 ch. base or portable scanner with this.

***I do not intend this to be spamming the groups that I am a part of. But only to let scanner users know of this trade I am willing to do.

Thank you,

Randy,
Ottawa, ON, Canada

Item: Sony Web TV Classic INT-W100
Descriptions: Web TV Classic INT-W100 model with audio/video cables, remote and keyboard. Bought this a few months ago and just receieved it only to find out this model doesn't work here in Canada. So it is no use to me. It is in excellent condition.

(MODEL SHOWN IS NOT A PICTURE I TOOK OF IT, BUT A PIC I GOT FROM ELSEWHERE. BUT IT IS THE SAME MODEL)

Highest bidder gets it.

OR (AND THIS IS IMPORTANT TO ALL BIDDERS):

I WILL TRADE EVENLY FOR A 100 OR 2OO CH. POLICE SCANNER MOBILE OR BASE, THAT IS IN EXCELLENT CONDITION WITH ALL PARTS AND IN WORKING ORDER.

******PRIORITY WILL BE GIVEN TO THE PERSON THAT IS WILLING TO TRADE FOR THE SCANNER.

If this is the case no one has to pay any cash with the exception of paying your own shipping.

BUYER MUST SEND RADIO FIRST THEN WILL RECIEVE THE WEBTV UNIT. THE SAME IF YOU WERE PAYING CASH. IF YOU ARE LOOKING AT DOING THE TRADE PLEASE EMAIL ME (RANDY_XPRESS@...) AND LET ME KNOW IF YOU ARE INTERESTED IN DOING THIS AND I WILL CLOSE THE AUCTION EARLY.

If you have any questions please email me and ask or post questions to the auction.

Thank you,

Randy Leclaire
Ottawa, ON, Canada

Hi,yHi, some people in those schools don't really have radio discipline
but they have radios never the less. Sometimes you can hear them talking
about there personal lives or just exhhanging jokes back and forth at my
high school's frequency.

3626. Re: [SST] 48 MHz crystal

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-09-18 02:16:37 UTC
From: Bob - K8YS
Topic: 3626 Message: 3626

you need to know a couple things first.

The crystal is most likely a third overtone. That means that the crystal (XTAL) is cut for 1/3 the operating frequency less the I.F.
Depending on the scanner, most are an IF of 10.7MHz where Bearcat are normally 10.8MHz, and even still, some are double 10.7 to 21.4MHz I.F...
SO... depending on scanner, you can have fundamental plus I.F. on lowband, or 1/3 overtone plus I.F. on highband and even 1/12th plus I.F. on UHF.

wow, this is digging out the memories (some bad :) out of the back corners of the mind.

Bob

some people are just so paranoied. School buses are interesting to listen to and one of my teachers didn't like it so much when I found the buse's 800 MHz freqs for the specialeed suses that I used to ride to school in high school.They had all kindf of things happen ranging from kids acting up to fights and to kids who never showdd up for the bus. She told me that I shouldn't be listening to them but I liseened to them all the time. Even after graduating I listened to them.

3628. School FRS Radios

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-09-18 04:15:26 UTC
From: jb
Topic: 3591 Message: 3628

I'm a real stinker, so I thought up some stuff that really pushes the limits. OK, here it is... If you want to cause real trouble for school folks. Find out what FRS channel they're using and get on it and try to talk to them. DO NOT INTERFERE BY KEYING OVER THEM, BUT WAIT UNTIL THERE IS A PAUSE. THen come on and say you're a kid and you want to talk to them on your radio. They will VERY likely say something to the effect of "Hey kid, you're in trouble now. This is the SCHOOL'S channel!" Uh-oh! Document this, or record it. The school officials have just restricted access to a Family Radio Service channel, which you are entitiled equal access to. Then, let the FCC know about this. They might even bring the "batmobile" over, or look down from their "eyes in the skies." It might not go anywhere, but it's a good test to see if the school folks have done their homework and know rule 1 of the FRS. Which by the way, can be found at http://www.fcc.gov/wtb/prs/famrad.html if anyone wants to look.

3629. Crystals

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-09-18 04:25:16 UTC
From: jb
Topic: 3591 Message: 3629

The old scanners that were able to take VHF-lo VHF-hi and UHF crystals usually had a band switch somewhere for each crystal slot. If it's not right beside the slot, there are 3 possibilities. 1: It's hidden somewhere on the board. 2:It won't do VHF-lo. 3: It doesn't have the switch, but will accept it. Just plug it and see. If it has really poor or nonexistent receive capability, it likely doesn't work.

3630. Re: [SST] 48 MHz crystal

As far as keypad tricks...
check out this website

http://home1.swipnet.se/~w-15926/ubc9000xlt/

I just recd a used 9000 that had already been programmed. I used the keypad combination from this website to erase all programming and it worked great.

I hope this helps,

3648. Scanner Audio wanted

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-10-02 23:51:42 UTC
From: RANDY LECLAIRE
Topic: 3648 Message: 3648

If anyone knows of any sites out there that offer any
Canadian Scanning Audio Content on there site. I would
like to know and post it to my
livescanneraudio@egroups.com which I encourage all to
join if interested.

Also any easy ways of being able to broadcast my own
scanner here in Ottawa Over the internet. Ottawa
should be broadcasting scanner stuff on the net.

Thank you,

Randy
Ottawa, ON
NYsing-178

3650. Fwd: Nine ways NOT to start your police report

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-10-05 00:33:11 UTC
From: Dan Fuller
Topic: 3650 Message: 3650

Another dumb joke,subject matter is somewhat appropriate!
----- Original Message -----
Message-ID: <39DB139F.3587D059@...>
Date: Wed, 04 Oct 2000 11:25:19 +0000
From: Richard Whitmore <richard@...>
Subject: Nine ways NOT to start your police report

(From American Police Beat, a magazine for cops)

1. It was the best of times, it was the worst of times ...

2. The names contained in this report have been changed to protect
the innocent ...

3. The mayor then made an illegal left hand turn onto Mulraney at
which point I opened fire ...

4. Before I get into the details, I've got a few "shout-outs" for my
homeys in the command staff ...

5. It was so dark and wet that night you could almost eat the mist.
The radio call penetrated the eerie silence with such piercing
intensity that for a moment, I was sure I'd lost my mind ...

6. Got call. Responded. Arrested bad guy. The end.

7. Mye pertnar an eye wher on petrol wen we seen a man act
suspishushly...

8. The suspect then tried to assualt me by repeatedly slamming his
face into my fist ...

9. A long time ago, in a galaxy far, far away ...

3654. Fwd: Introducing the submersible ICOM IC-M502 VHF, and the COMM

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-10-07 02:45:15 UTC
From: Rich Barron
Topic: 3654 Message: 3654

Introducing the submersible ICOM IC-M502 with DSC standard.

(Bellevue, Washington) ICOM, a leading manufacturer of communications and navigation equipment, has announced the IC-M502, the next generation marine VHF radio.

The IC-M502 is submersible to JIS-7 standards -- rain or spray won't bother it. The generously sized front panel looks at home in today's modern nav stations. Its large buttons and dials are big enough to allow fast and easy operation, even in rugged conditions. Yet the rear of the radio is shallow enough to easily fit into limited-space areas.

A large, backlit display features up to four dot-matrix lines of station information. Boat owners may program in their own marine channel names, on-the-fly. View latitude, longitude and time information on the dot-matrix display by hooking up the IC-M502 to a third-party GPS unit.

For emergency use, SC101 Digital Selective Calling (DSC) is built-in as a standard feature. A red, see-thru cover guards the DSC button against accidental activation. Additionally, the IC-M502's memory capabilities will store up to 40 DSC distress ID numbers, as well as 40 incoming messages (great for when you're away from the helm).

The same thoughtful features ICOM owners have come to know are still here: all U.S., Canadian and international channel reception; weather alert; dual/tri watch; instant access to channels 9 and 16; and ICOM's exclusive, easy to use "Tag" memory scan system.

The IC-M502 comes with a sturdy mounting bracket. Optional equipment includes a choice of voice scramblers (UT-98, UT-112) a flush mount kit and ICOM's new, remote control COMMANDMIC - a handheld microphone that looks and operates remarkably like ICOM's popular IC-M1V handheld radio, right down to the oversize LCD display. Besides controlling nearly every feature on the IC-M502, the COMMANDMIC also works as an on-board intercom, and is rated JIS-7 submersible. Both the IC-M502 and COMMANDMIC are available in black or white, and come with a three-year waterproof warranty.

For more information on the new IC-M502, the COMMANDMIC, or any ICOM marine radio, please visit your authorized ICOM America marine dealer or visit our website: www.icomamerica.com .

ICOM America, Inc. 2380 116th Ave NE, Bellevue, WA 98004 425-454-8155.

ICOM's submersible COMMANDMIC offers remote control of a marine VHF

(Bellevue, Washington) ICOM, a leading manufacturer of communications and navigation equipment, has announced the submersible COMMANDMIC, a handheld mic offering full remote control (except DSC) of the new IC-M502 marine VHF radio. Mount the main VHF in your nav station, and run the optional COMMANDMIC up to a fly bridge. It's like getting a second, plug and play communication station!

Installation is easy. The COMMANDMIC, aka: ICOM HM-127, plugs into a port on the back side of the IC-M502. For long connections, a 19.8 foot (6 meter) go-between connection cable and a non-invasive connection plug that flush mounts onto the fly bridge (or galley wall, captain's quarters, etc) comes with the MIC. The flush mounted connection plug comes with a rain cap, and once installed offers a clean looking, small footprint that doesn't jut into the surrounding area.

Use the COMMANDMIC as you would any other marine VHF. It's styled to look and operate much like ICOM's popular IC-M1V handheld marine radio. A large, backlit LCD that features alphanumeric channel identification (custom programmable by the user) is easy to see and use, day or night. And, because the COMMANDMIC is rated JIS-7 submersible, you can leave it out where it's exposed to the elements - rain or water spray won't harm it!

Need an onboard intercom? The COMMANDMIC doubles as one. It's a very useful feature on larger yachts, commercial vessels, or boats with a fly bridge or high lookout.

Both the COMMANDMIC and the IC-M502 are available in black or white, and come with a three-year waterproof warranty.

For more information on the new IC-M502, the COMMANDMIC, or any ICOM marine radio, please visit your authorized ICOM America marine dealer or visit our website: www.icomamerica.com .

Safe journeys,

I'll give one of those a try when I go back to work tomorrow. I'm sure my sergeant will appreciate my sense of humor (if I want to get some "days off" without pay) <g>

From: JEFFREY MICHAEL KENYON
Topic: 3626 Message: 3658

Well, I'm trying to learn more about this unit, and about what you can do with it in terms of stupid scanner tricks. The one crystal that comes in bad I took out and as it turns out you have to really yank those crystals out sometimes. This one when removed the legs were broken, and I don't know as to whether or not I'm going to replace it or not. Where I am from at home the weather channel on that radio comes in really bad and I don't use that radio for the weather channel, but I'm concerned about the other crystals and one of them I bought in June.
The scanner belonged to my grandfather who didn't really get into what he could do with the trick scene of scanning, but he was more concerned with the local police freqs because he was a policeman, and up until he got his first programmable scanner in 1983 that's all he listened to. This scanner has the four yellow lights and the sliding switches, and the brand is Regency. It takes the rectangle thumbnail crystals, and I have been wanting to learn more about this radio ever since I got in in 1996 which was when my grandmother no longer had a use for his scanners and gave the three working scanners to me. Well, his programmable isn't working, but the two crystal scanners have survived well, but I don't know what all they can do.
There is the four channel radio that has the yellow lights, and the crystal compartment you can get at by removing a cover similar to a battery cover. The eight channel crystal scanner that I have is also set up for VHF highband, but again when it was used by my grandfather and his cousin I don't think that they did any playing around with it, but were just concerned with the local police. However, if anyone knows of what I can do with either one of these scanner s I would really like to hear from you and thanks in advance.

I have not posted this invite to this list yet so here goes.

Learn to listen and to find audio sites for online scanners here.
This
may be a cross post but not everyone is on the same lists. This group
is growing fast and going good. You may join by going to
http://www.egroups.com/group/livescanneraudio

Who thought of the bright idea of broadcasting scanners from around
the world on the net. GOOD ONE!!!

Burglar.com is illegal, coppers claim
By: Lucy Sherriff
Theregister.co.uk

10/10/2000

A web site that connects the victims of a burglary with the people who have
their property is illegal, according to the police.

Theburglar.com bills itself as a "link to the underground". There are three
ways to register.

1) As a finder. In this category, you are completely anonymous, and theburglar.com guarantees not to pass information on to the police.

2) As a victim. You pay a fee of £2.95 per month to be allowed access to

the database of items found by the finders.

3) As an insurance company. In this case, you will only be given access to
your area.

Either of the latter two parties can negotiate with the first to determine
the value of a reward for the recovery of any items.

A spokesman for the association of chief police officers commented: "This
certainly seems to be breaking some laws in this country by selling openly
acknowledged stolen goods."

However, the issue is not so clear cut since it involves the Internet. A

spokesman for the NCIS (National Criminal Intelligence Service) says that
the problem with Internet crime is that it can be committed in one country,

broadcasting the site in a second country and the victim could be in a third. All the laws will be different, so actually working out which ones
have been broken is a bit of a headache.

The site has been operating in the US and Denmark for a while, and has recently expanded into the UK.

Say Bye to Slow Internet!

Topic: 3635 Message: 3662

Here's a good one just off the radio. Sheriff’s deputies were in route code 3 to a fight between neighbors... The wife of neighbor A called them and said her husband was assaulted by the neighbor. Dispatch told the officers in route "Wife is advising us that her husband is physically and mentally handicapped, and his mental problems make him afraid of weapons..." I guess in West Virginia, you’re crazy if you aren’t willing to go up against a shotgun.

From: DavidSnedecor
Topic: 3669 Message: 3669

I have noticed that a lot of people on the website are wondering about where to find different frequencies. The best place I have found to find frequencies is the FCC website! From here you can search for frequencies using all sorts of criteria. For example... I found my school frequency by just typing in the name of the school district in the licensee search area.

The website is http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

Happy Scanning

Dave

3670. Re: [SST] School FRS Radios

Hi, I think that it is a good point, and I just fortarded it to the assistant principal of my former high school which uses thos FRS radios. While I was there one of the hall monitoss said that it was a Radio Shack radio, and I later found out the frequency is 467.900 and that is an FRS rreq but the monitor said they needed a license from the FCC.

On Sun, 17 Sep 2000, jb wrote:

> I'm a real stinker, so I thought up some stuff that really pushes the limits. OK, here it is... If you want to cause real trouble for school folks. Find out what FRS channel they're using and get on it and try to talk to them. DO NOT INTERFERE BY KEYING OVER THEM, BUT WAIT UNTIL THERE IS A PAUSE. THen come on and say you're a kid and you want to talk to them on your radio. They will VERY likely say something to the effect of "Hey kid, you're in trouble now. This is the SCHOOL'S channel!" Uh-oh! Document this, or record it. The school officials have just restricted access to a Family Radio Service channel, which you are entitiled equal access to. Then, let the FCC know about this. They might even bring the "batmobile" over, or look down from their "eyes in the skies." It might not go anywhere, but it's a good test to see if the school folks have done their homework and know rule 1 of the FRS. Which by the way, can be found at http://www.fcc.gov/wtb/prs/famrad.html if anyone wants to look.

467.9000 is "NOT" an FRS frequency!

Well, the sensativity on this radio that is in my previous post is not the greatest, but from what I've been told it will do all three bands. It is a small area to work in where the crystals are and that makes it a chellenge.

3676. NEW VHF FRS FREQUENCIES

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-10-17 18:49:36 UTC
From: search114@aol.com
Topic: 3676 Message: 3676

This is just advanced notification of changes to the way the FCC does business. Effective November 13th, 2000 the following frequencies can be utilitzed for personal communications. This is in addition to the FRS (Family Radio Service) Frequencies already allowed by the FCC: 151.820 MHz 151.880 MHz 151.940 MHz 154.570 MHz 154.600 MHz These frequencies used to be utilized soley for business use, however have been expanded to allow utilization by individuals. There is no license cost associated with this and since these radios are cheaper than other forms of communications, they could possibly be utilized for 2-way communications for public safety type activities as well. For those with multi-channel radios (99 channel, etc) these could easily be programmed into your portables. **Note you are limited to 2 watts only on transmit though!!** You DO NOT have to identify yourself on these frequencies as well! Could be utilized for "covert" operations as well. MURS radios must be manufactured to meet, and must be operated to comply, with the technical standards found in Part 95 of the CFR FCC Rules & Regulations, and must be certified in accordance with 90.203 of the FCC Rules. [95.603] Chris Larrick Webmaster, LancasterFire.com (http://LancasterFire.com)

3677. Cheap vehicle mounting

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-10-19 13:56:19 UTC
From: Ian Gillman
Topic: 3677 Message: 3677

I have just mounted my SC200 handheld scanner in my car for about 95 cents and a free coke (or mounted for free and 95 cents for the coke).

I took a plastic coke bottle, cut the top off and cut out a square section in the front of it and covered it with duct tape to help it hold together. Now I have a coke bottle that has no top and no front. I can clip the scanner to the back of the coke bottle and have the scanner itself sitting inside what is left of the bottle (that is why I cut the front out so that I could reach the buttons). Now I put the coke bottle into the cup holder I have between the seats of my car, the coke bottle fits tightly enough to stop the scanner from falling over :-)

In the Cook County police Dept (North Dev.)

Car 53 had picked up a stray dog, then he called it in as follows:

53 to county, picked up the dog, As I just got the dog into the car, a lady came up to me and wanted to adopt it...

(Laughter in background at the station)

53 to county, i'm serious. She stated that she would stop by the shelter in the afternoon

Classify it as what, 53?

Uh...let's call it an H henry.

Things to think about...
People are dying in Isreal. There hatred is so intensed that they kill there own people. Yet, people from all over the world don't realize that war could break out almost at any time.

George Bush is Running for President. Yet, we all know how much the economy sucked when His Father was President and how Ronald Reagan messed up the Economy. We also know that George Bush is a Republican that would rather TAX the POOR and make the Rich even more Rich. Bush is a Fake. Go to http://welcome.to/georgebush for information about the real George Bush.

You could die tomorrow and everything you did in your life was worthless.

Think about it. Please go to these sites for enlightment:

Low-power radio may never get on air
Political fight could kill FCC plan
BY HEATHER FLEMING PHILLIPS
San Jose Mercury News Washington Bureau

WASHINGTON -- When Stuart Hansen, an Agilent Technologies Inc.
scientist,
first heard of the federal government's plan to create new low-power
radio
stations, he got an idea for serving his own community. What better way
to
teach children about technology than building a radio station from
scratch?
Such a project seemed like a logical extension of the work of the Museum
of
American Heritage in Palo Alto, where Hansen volunteers. The museum
educates the community about the mechanical and technical tools of
preceding generations and already teaches classes on building crystal
radios.

``People are really interested in setting things up,'' Hansen said. In
addition, the museum plans to use the station for other artistic
endeavors,
including the airing of original poetry, short stories and music in a
non-commercial format.

Yet, the fate of the museum's plans and hundreds of others like it
across
California and the country, depends on the political wrangling this week

between Congress and President Clinton. Congress approved an
appropriations
bill that Clinton is expected to veto that would gut the Federal
Communications Commission program to establish up to 1,000 low-power FM
community radio stations. If he vetoes the bill, it would open up a new
round of negotiations with Congress both over the bill's biggest issues

--
the appropriations for the State, Justice and Commerce departments -- as

well as the low-power issue. And it's far from certain whether the
low-power program will survive in the final package after negotiations
are
finished.

FCC Chairman William Kennard blasted Congress last week for endangering
the
low-power radio program and handing the powerful broadcast industry a
major
victory. ``The FCC already studied this issue for two years,'' Kennard
said. ``This is just a classic Washington ploy to kill a good idea by
studying it to death.''

Kennard also criticized Congress and broadcasters for addressing the
issue
through a government spending bill negotiated behind closed door.

``All this is done in back rooms in the dark of night,'' he said. ``The
people who want lower power FM stations -- churches, schools and
community
groups -- are not at the table.''

The National Association of Broadcasters declined to comment on
Congress'
vote.

Last January, the FCC created the low-power program to give schools,
churches and other non-profit groups a chance to serve their communities

through small local radio stations that would broadcast up to 3.5 miles
away. Since then, the agency has been flooded with applications and
inquiries about the new mini-stations from groups across the country.
From
California alone, the agency received about 300 applications.

The Silicon Valley Institute of Art and Technology, which hosts new
media
exhibitions, workshops, and artists in San Jose, is also hoping to win
one
of the low-power licenses. The non-profit group wants to use the
airwaves
to broadcast interviews with visiting artists, experimental music, and
other unique programming not found on typical commercial stations.

``It would be a tremendous experiment and a benefit'' to the community,
said Meryle Karloff Holmes, founder and director of the institute.

Others seeking low-power radio licenses include the Northern Valley
Catholic Social Services in Redding, Fremont High School in Oakland, and
a

number of churches and community groups throughout the state. The FM radio dial is already crowded in San Francisco, so it would be unlikely that more than a couple of stations would be permitted under the FCC's plan.

Yet nine months after the agency approved the program, not a single low-power station is on the air.

The reason: the National Association of Broadcasters, one of the most powerful lobbying forces in Washington, launched an all-out war on Capitol Hill against the new stations arguing that they would crowd the airwaves

and cause interference to existing stations. While the agency has gone forward with accepting applications for the mini-stations in 20 states, it has refrained from issuing licenses while Congress debates the program.

Saving low-power radio is a personal crusade for the FCC's Kennard. Over

the past few years, a handful of media conglomerates have gobbled up most of the radio stations across the country, squeezing out independent and minority-owned stations. As the first African-American chairman of the agency, Kennard sees the new low-power stations as a way to bring diversity back to the airwaves.

Existing FM stations, however, are worried that the FCC's plan would cause harmful interference to their signals resulting in static. National Public Radio, which prides itself in being one of the last bastion's of non-commercial, diverse programming, is also worried about the interference of static and has sided with the commercial stations.

The FCC's plan would relax decades-old interference standards, allowing additional stations to be crammed in on the FM dial where they originally weren't permitted. The NAB and the FCC have conducted competing engineering studies on the impact of the low-power stations, with differing results.

The FCC says the new stations would be operating at such a low power level -- 100 watts at the most -- that any resulting interference wouldn't be detected by listeners. The existing broadcasters say any additional interference is too much.

Tucked in to a sweeping government spending bill approved by the House and
Senate last week was a provision that would essentially stop the FCC's low-power radio plan in its tracks. It would require the FCC to stick to

its current radio interference rules for now, which the FCC estimates would
cut back the number of low-power radio stations by about 80 percent.

Only those in the most remote areas would be allowed to go forward, and probably none would be permitted in the Bay Area. In the meantime, the bill
directs the FCC to conduct a field trial of low-power stations in nine markets and then report back to Congress.

http://www.groveenterprises.com/wwwboard/messages/1132.html MI Scanner PERMITS OPEN TO EVERYONE!!!!!!!!
MI Scanner PERMITS OPEN TO EVERYONE!!!!!!!!
[Follow Ups] [Post Followup] [Monitoring Times Chat Board] [FAQ]
Posted by Mark Bajek on October 04, 19100 at 19:06:36:
Dear MT;
The Michigan STATE Police have recently opened the application for scanner Permits to NON STATE RESIDENTS.
Prior to this, Tourists WERE considered CRIMINALS if they transported a scanner into Michigan...
NON permitted scannists both residents and NON residents are subject to 1 yr in Prison+ $500 fine.
(if caught with a scanner anywhere in the vehicle,even the trunk)
Hams Tech Class or above are exempt from MCL750.508

Please TAKE advantage of the POLICY and MSP's "hospitality"

EVEN if you or your spouse have NO intentions of Traveling to Michigan.......APPLY while the gettin's good.....
Ask your relatives....and freinds to apply also....
The more the merrier......who knows what can happen if thousands of scannists or potential scannists....
Make the weight of a mass application felt in Michigan......
They May seek an alternative to the current law.....
and seek a permitless version similar to NJ's
http://www.afn.org/~afn09444/scanlaws/nj_scanr.html

The Permits applications are free and can either be obtained via phone (517) 336 6240
or
by download.
http://www.mpscs.com/com-022.pdf
(application)
They are automatically renewed every three years if you keep your colective nose's clean...
Thanks for your help to all who wrote MSP and MI's Govt. offices....with interest in the scanner question in MI....
NOW please apply......get the permit.....
Until the law is modified.....this is a welcomed middleground....
Please inform your scannist freinds
I'd ask your cat and dogs to apply also, but they need a social security number to do a criminal background check at MSP......

Best of luck with the process, the paper work takes about 1 month for a reply.
Please e-mail me with your scanner permit numbers
MBajek000@....
I would be interested in the amount of permits issued.
currently they are upto 334 so far this year...

thanks again
Mark Bajek

3683. Fwd: Telecommunications Sellouts

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-10-31 01:37:05 UTC
From: Dan Fuller
Topic: 3683 Message: 3683

Here's some more info about my earlier post,it looks like there might be
hope yet.
----- Original Message -----

Subject: Telecommunications Sellouts

Telecommunications Sellouts
The Washington Post
Friday , October 27, 2000

IN THE FRENZY of last-minute horse-trading on Capitol Hill, lobbyists

are scrambling to slip into spending bills an unusual number of
special-interest provisions dealing with telecommunications. Because
the negotiations are conducted behind closed doors, the public has
next to no role in the process; even the Federal Communications
Commission is in the dark. Only those who ante up get to play.

An appropriations bill agreed to yesterday contains a rider designed
to gut the FCC's low-power radio program. The program would give
community groups access to the airwaves using small FM transmitters
that can broadcast over short distances. It shouldn't be much of a
threat to the big boys of broadcasting: The licensees would be
noncommercial broadcasters using signal strengths only a small
fraction of those the commercial broadcasters employ. Yet that hasn't

stopped the National Association of Broadcasters--joined by National
Public Radio and others--from pushing a rider to dramatically curtail

the FCC's authority to issue the licenses. The claim is that
low-power
stations would cause interference. The reality, at least for most
opponents, is fear of competition. President Clinton has said he will

veto the spending bill and has expressed concern about the low-power
provision, among others. He should ensure that in any final deal the
commission has the authority to go forward with its program.

Hardly less offensive is AT&T's effort to change federal rules
concerning cable ownership concentration. The company has made no
secret of its concerns about these rules, which forbid any one
company
from serving more than 30 percent of cable subscribers nationally.
Yet
when it recently acquired MediaOne Group Inc., it agreed to live

within them by divesting itself of some subscribers. And while AT&T maintains it will honor that agreement, it is also now seeking to rewrite the rules--specifically to change which customers count toward
the cap. The courts, not the appropriations process, are the right venue for AT&T's gripe with the rules. A handout to the cable giant should not be slipped into law--particularly not without reasonable and open discussion first.

Say Bye to Slow Internet!

3685. Fwd: ICOM Sets The Satellite Radio Standard With The New IC-910

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-11-04 17:29:14 UTC
From: Rich Barron
Topic: 3685 Message: 3685

News Release

ICOM Sets The Satellite Radio Standard With The New IC-910H

With the introduction of the IC-910H VHF/UHF all mode transceiver from ICOM, the new standard in Amateur Radio satellite radios has arrived. The IC-910H contains a full 100 watts of power on VHF, eliminating the need for an external high power amplifier for satellite uplinks. For mode-J satellites, ICOM provides 75 watts of output on UHF.

With dual high sensitivity DSP compatible receivers, weak signal DX and satellite communications are second to none. Optional preamplifiers for each band are available for installations requiring additional receive gain. The optional UT-106 DSP units can be added to both bands for noise reduction and improved S/N radio.

Packet operation has never been easier. The IC-910H contains two data sockets for simultaneous packet operation on the main and sub bands. New high-speed PLL lockup times were added to make high-speed 9600 bps packet more reliable. A transceiver modulation input limiter stops modulation anytime the input level to the radio is exceeded.

ICOM also added an easy to read 3.5" display. Coupled with a 10-key entry pad, direct frequency or memory channel control are at your fingertips.

These features don't come at the expense of size, measuring only 24x9x24 cm and weighting 4.5kg, the IC-910H is ready for field day or any other portable operations that require a top notch, all mode VHF/UHF transceiver. Without a doubt, the IC-910H sets a new standard for satellite operation.

Included with the IC-910H are a DC power cable and HM-12 hand microphone. For further information about the IC-910H, contact your authorized ICOM dealer or ICOM America, Inc., 2380 116th Avenue N.E., Bellevue, WA 98004.

Topic: 3683 Message: 3690

We're all partially guilty for giving these giants their power (money).
Everytime we buy a product advertised on radio or TV, we encourage heavier commercialization of our airways and beg the giants to clog their programs with even more ads. Every time one of us reverts to the use of a cell phone, we pay for our own persecution. It's a real catch-22. It's hard, if not impossible to reverse years of big money killing little people. Just call your congressman and say you'll boot their ass come Tuesday. All this talk about education and the're playing along to keep it illegal for schools to set up a tiny radio station? Let 'em know they're two-faced and you will vote for neither one. The only voice you have comes once every 4 years. Use it!

Subject: [scan_michigan] Detroit Medical Center frequencies

Hello to all on the list. I am wondering if anyone has monitored any radio traffic within the Detroit Medical Center and how successful were you in monitoring it? I am just doing some research on the different licenses and even though I will be in Detroit for the next couple of days I don't think that I'll be near the medical center to do any serious monitoring. All of the frequencies that I have pulled off the FCC's homepage are either in the 420 MHz band or in the 460 MHz band, and one has about 9 links from the frequency page to the types of emissions that this frequency is licensed for. The callsign is WPHC817 and it is licensed to Harper Hospital, but as I said before I am having a hard time monitoring anything from the medical center even when I am home. Any help or information on these frequencies would be appreciated, and thanks in advance.

3695. Is it possible?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-11-14 16:56:04 UTC
From: jb
Topic: 3693 Message: 3695

Depends what you want to see. First, for standard broadcast, you need
to
have the ability to demoduate AM. Lots of scanners only do AM in the
aircraft band. If you want picture only, it's possible. If you want
color picture,
you need 2 scanners, video and color. If you want audio, you need 3
scanners, with the 3rd being able to demodulate wide band FM. and
after
all this, you will probably have to tap into an existing TV set to see
it, as I
know of no soundcard fast enough to sample the signal.

Topic: 3696 Message: 3696

Howdy all,

I just got a Pro-92 scanner on sale at Radio Shack the other day and saw that there was software and a connection kit to hook it up to my Mac, but I know not where to get it.

Aside from that, what does the software do? Will it let me type the text in for frequencies and banks rather than hunt and peck at the keypad on the scanner? I know it will let me make a back-up of all the frequencies, but are there any other bells and whistles?

Rich Barron

3699. Attic Antennas?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-11-14 18:52:35 UTC
From: Rich Barron
Topic: 3699 Message: 3699

I'm in a new neighborhood and the CC&R's aren't too fond of external antennas. Not that I have a big one - it's a RS scanner antenna that has about six elements in something of an hourglass shape and is about 3' tall. To make it easier on me and avoid any problems with the neighbors, would I loose much reception by putting it in the attic space rather than outside on the roof? We have concrete tile shingles.

If the roof tiles will block too much signal, what are some other good options?

Rich

You should not lose too much reception by having it in the attic. You will want to avoid mounting it too close to any electrical wires you have up there.

the shingles are not a problem but if you have foil insulation in the attic that could be trouble....its ok if it is just on the attic "floor" but other wise you will get heavy attenuation...

3703. Re: [SST] Attic Antennas?

My highschool buddy is a lock smith, his wife insisted on buying a house in one of those places... he is not allowed to park is truck [does n't matter that his truck cost twice as much as the neighbors Lexus when fully outfitted] in the front of the house, nor is he allowed to put up an antenna to talk to his other trucks.... so.... we built an antenna, a j-pole in this case, and stuffed it inside a piece of PVC pipe. We painted the pipe to match the brick on the house and the part that was above the house was painted a blue/grey. If he is ever asked what that thing is, is answer will be that is it a VENT from the basement. No one has ever asked, and that has been there for 8 years.

You could also do the same, put in a Comet or Diamond 6/2/70cm mobile antenna, using 1/8 brass rods, make a ground plane, fit it all together, paint it, the only thing that would be visable would be three brass rods. the 6/2/uhf antenna would give you gain as well as coverage from 40 something to 460 something... OR a fiberglass radome antenna - placed inside the pvc, painted in your favorite camoflauge... OR a flagpole antenna... what self respecting self-appointed CC&R cop would object to a flagpole? A real covert op would use the flagpole, then with the BIGGEST USA flag he could find, stitch #22 ga wire along the edge of the flag, perhaps even lacing the antenna wire along the stripes....

Be devious or MOVE!

Bob

The "moderator" of our scanner club (CARMA) has an impressive array of antennas in his attic (last count was 13?) and he has no trouble listening anywhere! He's got omni's, gains, directionals, and specialty antennas, all which are connected to a very impressive station in his ham/scanner/computer room. If it can be heard, Rich Carlson can hear it!

I thought he took a few pics of the attic "array" but I guess not. For some really impressive pics of the radios/computers in his shack, and the mobile install, go to this link:

Just thought you all would like to know how the FCC thinks of US not very much and we are in a free country

The FCC has again turned down an ARRL petition to extend the coverage of its limited pre-emption of local antenna ordinances to include restrictive covenants -- so-called CC&Rs -- in private developments. In a ruling issued on November 13 by the Deputy Chief of the Wireless Telecommunications Bureau, the League's petition for reconsideration of an earlier denial was turned down. We will post more information on the CQ website news page as it becomes available.

as with most hams,and scanner buff's,if you can
without damage to your house or self,just try it...if
you see some major obstacles like nosie from
electrical devices,or some other stuff you might try
another location..i remember my dad installing a home
made t.v. antenna,in which he mounted it in the
garage..but it sound's like for you to just experiment
on it..larry,n6hpx,maritime moble,singapore

Glad to see that the http://www.medicdispatch.com site
is back up and running. Anyone interested in scanners
and such that might be interested in listening to
scanners online when it gets boring in your own
hometown, be sure to join Livescanneraudio for
discussions on where we can catch the latest scanners
online broadcasting live audio over the internet. I
find this to be absoloutly the best for us hobbiests.

To join and to find more interesting scanners online
follow the appropriate links at:

http://www.egroups.com/group/livescanneraudio live
audio discussions

http://www.MedicDispatch.com Ottawa and Toronto, ON,
Canada live scanner broadcast coming soon.

http://www.policescanner.com self explanatory. lots of
links

http://www.firedispatch.com self explanatory.

See ya all soon, and happy scanning

Randy

Ottawa, ON, Canada

3711. attic antennas

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-11-17 10:05:27 UTC
From: paul fladeland
Topic: 3711 Message: 3711

I am from a small town and I do not know what CC&R's are but it sounds like you live in a Soviet suburb. You can't park your truck on the street, doesn't make any sense to me. I have had my brand new truck completly covered with heavy chunks of mud on and I park where ever I want, and I really don't care what people think of it.

3712. Re: [SST] Re: Attic Antennas? US Gov't.Freedoms.CB/SSB/USB antena mod...

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-11-18 20:43:43 UTC
From: sxyfirhose@aol.com
Topic: 3712 Message: 3712

Just to add to the other members short statement about OUR FREEDOMS and 'OUR' Gov't. We are losing more and more freedoms everyday to the ruling elite. They no longer represent us but rule us now. Every freedom that we should have is no longer. They are using many techniques every day, some not so noticable. Between the Conquer and Divide and The Boiling Frog type ways, we are losing it. Just remember that every ruler implemented GUN CONTROL on their Citizens and then Conquered and Divided complety. By then it was too late except for a few resistance fighters.
History repeats itself.

As soon as the 2nd Amendent has been corroded by the gov't and enemies, than all other freedoms will be gone. The radio's are usually the next thing on the list to ban from serviant's when the gov't takes over.
Really sorry this is so long winded, but I could go one and one, but by seeing another member of SST intrested in OUR freedoms, I just had to comment.....
What is the best way to use/make a mobile MAGNETIC antenna 'base' for indoor application and if possible for hiking/camping? Would be used for CB SSB/USB, VHF/UHF possibly?

is the mouse RF or IR???

if it is RF, you can go to the FCC web site www.fcc.gov and do a search on DEVICES. Enter the FCC ID number and it will tell you who it is licensed to and the frequency of operation.

Bob

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists who are frequency hunters. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide.

Ontario Unlisted Frequency Guide - http://www.interlog.com/~mstone/

3725. Re: Attic Antennas?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-05 09:09:55 UTC
From: Walter Jinright
Topic: 3699 Message: 3725

Hi Rich,
Walter here , I am back and mobile now after the accident over a year ago. And I see you left me at moderator status, that cool. Well about your question, 1. If there are no covens or restrictions, putit up brother. 2. If there is a restriction , talk to them and try to get a compromise. Or you can build a p.v.c. Flag pole , and inside of it you can hid an 11 meter dipole.

There are many ways around some , but if you have the same antenna I do , I would not blame anyone for complaining , I have recently aqquired a 9 element beam that come off a 1250 ft tower, the antenna itself weighs about 60 pounds , Luckily I have no one to complain here , because I have close relatives for neighbors.

But I can hook up my relm mpv-32d , hand held 5 watts, into this beem , fixed on an armstrong rotator (lol)At antenna height of 15 ft agl and I can talk from Milton , FL to Gulport , Mississippi and Tall. , FL , also to ships offshore around 40 miles past the Trysler grounds (100 miles from me)
and remember this with five watts, I also have a 60 watt amplifier, I get mege contacts with it on 2 meter.

But as I mentioned before, check with the neighbors and be creative as to what you want to hide an antenna in, check out barnes and nobles and books a million , I think they had a copy of the ways that spies in the cold-war would erect antennas with-out notice, as the government does , hide it in plain sight , them deni all knowledge of it ? ;-)

Also rich,
I plan to be back and helping more with the pending messages and open for questions from the members, either by Escambiasar54@...
or Ask_Walter@... .

Peace, And Happy Holidays,
Walter

is the mouse RF or IR???

if it is RF, you can go to the FCC web site www.fcc.gov and do a search
on
DEVICES. Enter the FCC ID number and it will tell you who it is licensed
to
and the frequency of operation.

3731. Scanning Problem 2

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-08 06:13:55 UTC
From: kc6nah@juno.com
Topic: 3731 Message: 3731

My Pro92b displays "all channels locked out" when going from
bank "9" to bank "0." None of the channels in bank "0" are locked out.
After posting a similar message with several other groups, I inputted
active frequencies into bank "0" and the scanner seems to stop on them
Does anyone have any idea of why I get that particular display?

Thanks,
Hubert

Hubert , Try going to http://www.pro-92.com it is a web site for Pr0-92's only , I have also posted the link in the "Link" section.
Walter

the other day, i was scanning, listening to the snowplows attempt to keep the roads clear (well, it wasn't snowing too hard)

Anyway, they said:

Betty (the Leader): Guys, I just checked some of the 1s and 2s, they have a lot of glop on them, so just put down the plow, shove it off. Just get it to the side. Jim, don't start aiming for the mailboxes yet.

Jim: Darn!

From: Lenn G. Carpenter
Topic: 3734 Message: 3734

A friend of mine bought a house quit awhile back and it was in a rural area and the previous owner told him he loses at least 1 sometimes 2 mailboxes a year and sometimes the whole post.
Best part is when he bought the place one of the first things he did was fix up the mailbox, 6 inch outside diameter pipe with a half inch wall, which had 8 holes drilled in it with 2 inch solid steel bars placed
in these sticking out about 8 inches either side this was then placed into a hole 5 feet deep and then it was filled with concrete and the post was filled with concrete. This then had a 4 inch pipe welded to the top
of it along with support bars. The box was placed on top of one end of this bar. We are talking one heavy duty support here.
Best part was he was outside cleaning the snow when he heard the plow coming and the guy hit the box, quit the bang and turned the plow a little sideways on the icy road, it bent the top bar and did a little damage
to the plow, bent some of the stuff that holds the wing in position. Needless to say it has not been hit again in about 18 years.

3735. Heavy traffic day

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-11 17:05:49 UTC
From: jb
Topic: 3734 Message: 3735

Sunday morning at about 5am, I stepped out to get some wood for the fire and noticed a hard frost on the ground, but it seemed too warm and I noticed a light drizzle start. I was thinking freezing rain (and the drivers around here think they are in NASCAR) so I got all 5 scanners going. One for fire, one for EMS, one for police and two for the adjacent counties. It about 6am, the accidents started comming in heavy. The radio traffic, as I predicted, required all 5 radios. It got so bad 3 police cruisers wrecked, 1 ambulance wrecked, and there were over 60 MVA's in my county alone. Police shut down ALL OF THE BRIDGES AND MANY PORTIONS OF THE INTERSTATE. Even with 5 radios, I couldn't keep up... had to eliminate the other counties and tune each radio to a single channel without scanning.

It was Like that out here to. there were, i think 3 cruisers wrecked, 2 of which were hit by Streets and San. and one by IDOT. There were cars wrecked, mailboxes hit :)

3 of our snowplows were temp. wrecked, just for running 13 straight hours. 1 transmission broke, one overheated, and one just stopped running. 1 salt spreader broke down, and another's dection system broke down, which was supposed to be fixed over the summer, by the way.

Oh yes, and an ambulance stalled, en route to an auto accident. Wouldn't like that one to be responding to me!

I was like you too, but i have 4 scanners going, Pub. Works (snow removal), Northbrook Police, RED Center, and Cook County PD.

Texas is the same way, people spin off the road in rain (I heard it happen on the scanner last week) so you can imagine what it is like when it snows or we have ice.

I heard a dispatch a few days ago, "There has been a car versus cow 10-50", which is about as exciting as it gets here in rural Texas.

Couple of humorous stories (I hope...)

I was a 911 dispatcher for several years, first as a supervisor in a small center in East-Central Indiana, and then as a communications training officer in a fairly large center in Southern Wisconsin.

Late one evening back in Indiana I was working the Sheriff's Department position in our dispatch center when I had a similar call. 10-50 PD only car vs. cow. As was standard procedure, I asked the caller if the cow was deceased or if he could tell. Caller informed me that although his car had sustained major damage, the cow seemed fine and had left the scene. Feeling a bit mischevious, and knowing the deputy I was dispatching to the call had a great sense of humor, I put it out as a 10-50 LSA (Leaving Scene of Accident) Car Vs. Cow...Unit 21-7 responded immediately in a deadpan voice "Can you advise description of the LSA cow and direction of travel?" We laughed our a**es off in dispatch. Doesn't come across as quite as funny now that I read it. I guess it was a 'you had to be there' moment, LOL!

Secondly, while attending a dispatch seminar we were played a tape of a police dispatch somewhere in rural Texas, just for fun. It consisted of a deputy/officer arriving on the scene of an automobile accident involving a tractor/trailer carrying a load of pigs. In any event, the officer arrived on scene and told the dispatcher via radio to get someone out there, as he had a dead pig on the highway. If you didn't already see this coming, the dispatcher answered in a deadpan voice..."10-4, can you advise which officer is down...?" Hilarious!!!! (And I still see the humor in this, even though I work currently as a patrol officer...gotta keep the gallows humor goin' in this job, LOL!)

FWIW...hope someone enjoyed 'em!

3746. Fire Calls

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-13 08:16:56 UTC
From: Walter Jinright
Topic: 3746 Message: 3746

Being around the Pensacola Beach fire dept., I have seen a lot. The Dept. is mostly voluteer, with New paid Firefighters during peak week day hours.
Although nearly all calls are medical in nature, there is an occasional fire call.
One day the tones "dropped" for a residential structure fire while the paid guys were on duty, Well the first thing heard is engine 1319 enroute. Then the cheif and a volunteer lieutenant was enroute.
Arriving at the scene light smoke showing, now even enough to call light really. The first-in paid guy went in bunker gear air-pack the whole 9 yards, for a little grease not even on fire, just smoking.
The Lieutenant was on scene and went in wearing bunker pants t-shirt and helment.
When the chief arrived on scene , he started laughing, all of the new firefighters were like ? what ? He said (pointing at the lieutenant) now there is a beach firefighter.
Allthough it is great to be prepared he told the, but he has now nicknamed one of the squirrel, go figure, LOL

I am sure most wont get this story unless you are a firefighter in a district where you rarely have real fires.

Walter

Hi Walter, I'm a part-time/call firefighter in Lincoln RI and the vast majority of our calls are also medical in nature. We have 3 full timers (inluding the chief) for day coverage and guys like myself respond from home or work the 6 hour evening or overnight shifts. We occassionally get the odd box alarm or system malfunction just like your story. The last time such a call came in the guys in the district next to ours responded with an engine and ladder company and we were dispatched as well since the location was at the border of our district and theirs. A captain from their department arrived on scene called "nothing showing" and proceeded to enter the building wearing just a turnout coat, helmet and blue uniform (NFPA rated) pants. While the guys on the apparatus prepared to tag a hydrant/pull lines if needed he investigated. There was no smoke, no heat. The captain came flying out of the building shortly after, grabbing his lapel mike, "53 to fire alarm, make this a code red, give me a second alarm!".
When it was all said and done it turned into a 4 alarm fire, the building will have to be demolished (we never actually lost it. It still stands and could be rebuilt but that's an isurance issue I guess), 2 rooms flashed and one of my Lt.'s was blown down the stairs three times in the course of putting this out.
Luckily no major injuries occured, one guy cut his hand and one burned his ears.
Currently I'm recovering from burns suffered in training while using full protective gear. I'm not seriously hurt (except my pride I guess), just some 2nd degree on the face, the burn cream actually attratcts more attention than the burns themselves.
We often respond to our box alarms with some measure of complacency especially the ones that ALWAYS come in (especially at 4 am) but nobody gets off that truck with their bunker gear, helmet, tool and airpack (ready for use but not breathing bottled air). The exception is the officer who usually doesn't have a tool on him and may leave the airpack unless large

volume of smoke is visible. I can tell you for
certain I'll always have my gear on. Getting burned
sucks! And this was relatively mild.
The day one of our guys goes in with just pants,
T-shirt and helmet he'll probably be crucified by the
chief, deputy and every one else. I'm with the
squirell on this one!

Paul Silva (Scorched squirell), Lonsdale Fire
Department, Lincoln RI

I agree Pual,
I have had some pretty bad 2nd degree burns (non-call related) and I agree that you should go ointo the battle fully prepared. But this thing at the beach, you just had to be there, It was the looks on the faces and the way the cheif said " now there is a beach firefighter" , It was something to laugh about , because there was no harm done to anyone.
And I do not condone going in with t-shirt and bunker pants unless it is a medcall only. I now am strictly med calls only, and I go in polo dept shirt and EMT trousers, unless an aircraft, boat, or MVA, then I wear the proper gear.

Thanks for the post,
Walter

3750. new baby monitor frequencies?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-16 05:40:08 UTC
From: JEFFREY MICHAEL KENYON
Topic: 3750 Message: 3750

Hi all, this is the first time I've heard any new room monitors on 900 MHz, but now that I'm home in the heavily RF populated Detroit area I happened to run across someone with a room monitor on 900 MHz. I can remember reading once on the list that this monitor band uses Wide Band FM, but I was able to hear things in narrow band as well as wide band. I dusted off the Pro-60, and charged up the batteries and tried monitoring in wide band as well as narrow band FM, and the transmissions were readable in both modes. Does anyone know what all these new monitors include besides the fact that they are off of the crowded 49 MHz band?

902 to 928 MHz is a shared band. It is shared with just about everyone! You would not be surprised at what you can hear there.... and there are no monitoring restrictions since it is also a shared Ham Band.

Just remember that in Florida, you must be a ham, Public safety official, or Neighborhood watch to use the scanner in a vehicle, But if you fit into those catagories, It is fun to program the 49 mhz , and 900 mhz spread into a bank and drive around. You'd be amazed at what you will here business districts as well as neighborhoods.

Hi Walter,
My request was a teaser to get a reply... bait for my hook.

My real question is how ACTIVE is the SA in your area? I am a SATERN member and a local volunteer. The SWONEKY Div is trying hard to be active supporting fireman with coffee, hot chocolate, orange like drink or plain water, cookies etc from the canteen.

The Metro Chicago SA is VERY ACTIVE supporting fireman, I am just wondering how active the other areas are.

I am looking for input from the firemans point of view.

Okay,
I gottcha now. Here in Escambia County, FL we have a station just for that. They are known as Fire Support. And whenever there is a special detail or large emergency, Fire Support is there to provide whatever needed.

In one case, We were out looking for a lost person. The director of fire support asked a group of guys what they would like for dinner ? Well, joking they said steak. She walked off laughing. 45 minutes later a local company arrived with $900 worth of cooked steak , still hot. And the company was nice enough to donate the food.

So we get treated GREAT by our support people. Couldn't do the job as good without them.

Thanks, I knew that, but I hate to say this, but in some areas this band
is getting to be like 49 MHz. I am in Grosse Pointe Farms, Michigan just
outside of Detroit, and my mom has a cordless phone on 900 MHz, and last
summer I had to manually change the channel. I haven'
t heard much other then her phone, and my neighbor's 900 MHz phone, and
now this baby monitor. I think that this kind of a monitor has a video
screen right?

What frequencies do you suggest? I know the 49 MHz baby monitor freqs like the back of my hand, and there are five of them that I monitor and that's all there is that I know of, but what about the 900 MHz band. Thankfully for me, if I were to drive you'd better get off the road because I might just hit you or crash into a tree, so I walk with my scanner and tune in the 49 MHz and sometimes the 900 MHz band. I go to school at Ferris State University in Big Rapids, Michigan, and thankfully I live near a residential neighborhood with either young families or college students who are renters. Never the less there is quite a bit to hear on 49 MHz, and I would imagine 900 MHz.

The entire 902-928 Mhz is shared with phones, wireless infaces, baby monitors (with and without video) If you have capabilities of amatuer tv, scan that 900 mhz and look for the picture too... There are also spread spectrum devices in this range, were data is transmitted on multiple freqs, bit bursts that go out in a wide spectrum to allow transmission of more data in a shorter time, I guess that's the simple way to put it.

But just set an auto scan from 902-928 Mhz and to help, you can get 3, 5, 7, and 11 element yagi antennas pretty cheap in online auctions, try using one of them, then the 800 - 900 mhz you'll here will be far better than a multi-band antenna.

Thanks, that is what I do. I will have to get out if the weather gets better. These baby monitors on 900 MHz must be going down in cost because there are more appearing. I don't know though, but I believe that they can be modified for different things right?

To pick up more TV stations....and a lot of other stuff.....put a
TV antenna on top of a rotor, but, mount it vertically on a tall enough pipe
above the rotor. Make sure it is a light, mid-length, combination,
VHF-UHF-FM antenna such as the Channel Master 3030 or Delhi 925 (those are
the Canadian part numbers, possibly U.S. as well). This can be a
roof-mount, chimney mount, or tower installation as high as you can afford
to climb. It will be useful from 40 MHZ to 1 GHZ and can listen to cell
sites from 30-50 miles away if you dare to monitor them with the right and
possibly illegal equipment/practices. Some antenna manufacturers make an
antenna just like this for this purpose, and even boast that you can
transmit low power on certain frequencies with it.

ASSUMING that you want to receive off-the-air and not via cable or DBS...

how far are you from the TRANSMITTER? Most of the time, the studios are in one place (for business traffic) and the transmitter is in the boonies (for cheaper land, less RFI complaints, and the ability to put up the tower). Contact your favorite TV station and ask them where the transmitter is located.

After you find that, as with anything, the bigger the antenna, the better the antenna. If you want to watch TV from a city 150 miles away, you will need a BIG antenna, if it is only 20miles away, just a few elements work. Remember that a MAST MOUNTED pre-amp is a good idea. You want a MAST mounted amp, the reason is this, you have line loss, you want to get the maximum gain from the amp. If you put the amp at the TV, you only amplify what is left after the line loss... if you put the amp AT the antenna, you amplify what the antenna collects and overcomes the line loss.

If you use a directional antenna (Yagi, beam, multi-element, what ever you want to call it) you can use a rotator to aim the antenna at the city you want to view. From where I live in Cincinnati (far east), I can aim at Cincinnati and get the three major channels, I need to tweak the direction to get the other ones, I then aim at Dayton for Dayton, Louisville, Lexington, Indianapolis and if I am reallllllly bored, I can aim at the KET (Kentucky Educational TV tower between Covington and Lexington).

Use high quality feed line.... RG-6. Use high quality splitters. Junk produces junk.

Now, if you do not like to go with the rotatable Yagi, I replaced the big TV antenna I was using when I put up the DBS, and I use an amplfied omni that looks like a UFO on a stick. I use it to watch Ch3 out of Louisville. When WHAS is full quieting, Six Meters is wide open!

Bob

Hi,
I have used a discone "aal-band" antenna for tv before and it worked fine, you do not have to adjust it because it is omni directional, but if you have a "beam" scanner antenna, you may have to make adjustments.

3772. Can Someone PLEASE Help Me?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-19 17:29:48 UTC
From: saltec1@yahoo.com
Topic: 3772 Message: 3772

Hi

First I'd like to apologize if this posts twice or even three times. I don't know what I keep doing but I loose my message once I preview it.

Anyway let me start over...My name is Tecia and I just subscribed to this group (I am so glad I found it!) I am a stay at home mom to three small children and I ALWAYS wanted a police scanner (just because I'm nosy I guess and like to hear whats going on). Last week I bid and won one on EBay. The problem is I have NO idea how to work it! I am hoping some kind person out there can help me!

The kind I bought is "Radio Shack 50 Channel PRO-2014" The man that sold it to me told me it worked good but he didn't have the manual. I did go on-line and print one out, but I can't figure it out! I also know I need codes (if that is what they're called) and I thought I found them on-line, but when I typed them in it says "error". I live in Topeka Kansas. I couldn't wait to get this thing in the mail...now that I have it, I hope I can program it to work here in my town. My friends and even my husband, all laughed at me when I excitedly told them what I bought, but I don't care...I can't WAIT to get this thing set up and working. So please, if any of you can help me I'd appreciate it greatly!! Thanks in advance for any advice you can give!!! Once again if this message posts more than once...I am Sorry!

Tecia

.....
Tecia,

First, turn the scanner on, press manual, turn the volume around half-way, and turn the scquelch until you hear static. adjust the vloume accordingly, then :
1. Press PGM. PROGRAM appears on the display.

2. Using the number keys, enter the channel number where you want to store a frequency press manual, then press PGM. Or, repeatedly press PGM until the desired channel number appears on the display.

If a frequency is already stored in the channel you selected, the scanner displays the channel number and ch, and the frequency. If the channel is empty, the channel number flashes.

Note: If you enter an invalid channel number in Step 2, the scanner displays Error. Simply repeat Step 2.

3. Using the number keys, enter the frequency you want to store into the displayed channel. Press (.) to enter the decimal point.

Note: Your scanner automatically rounds the entered frequency down to the closest valid frequency. For example, if you try to enter a frequency of 151.4830, your scanner accepts it as 151.4800.

4. Press ENTER to store the frequency.

Notes: If you entered a frequency in Step 3 that is already stored in another channel, the lowest-numbered channel containing the duplicated frequency and dUPL (duplicate) flash on the display for about 3 seconds. To store the duplicate frequency anyway, press ENTER. To store another frequency instead, repeat Steps 3 and 4, entering the new frequency in Step 3.

If you enter an invalid frequency in Step 3, the scanner displays Error. Simply repeat Steps 3 and 4.

SEARCHING FREQUENCY BANDS

You can search for transmissions within any of the scanner's 10 FREQUENCY bands, then store them into the scanner's channels (during a band search) or temporarily store one into the scanner's monitor memory (during a direct search).

Band search

You can select a frequency band and search for transmissions within that band.

1. Repeatedly press BAND until you see the frequency band you want to search.

The scanner displays b, the band number, and the range for the frequency band. Then, after about 2 seconds, the scanner displays SEARCH (/\), the current channel number flashes, and the scanner starts to search the frequencies in the band. When the scanner finds a transmission, it stops and displays the frequency's number until the transmission stops, then it starts searching again.

Notes: You can change the direction of a search by pressing (/\) or (\/).

To manually step through the frequencies in the selected band, repeatedly press and release (/\) or (\/). To continue automatic search, press and hold down (/\) or (\/) for about 1 second.

To select another frequency band to search, you can use the number keys to enter the band's number. The scanner displays b, the new band number, and the range for the new selected frequency band, then searches the band.

2. When the scanner finds an active frequency, you can do either of the following:

To store the frequency into the flashing channel, press ENTER. The scanner stores the frequency in the flashing channel, then the next available channel number flashes.

To continue searching, press and hold down (/\) or (\/) for about 1 second.

Note: After you store a frequency into the last available channel, --ch appears instead of a channel number on the display. If you try to store another channel while --ch is displayed, CH FULL appears. If this happens, you must delete some frequencies from channels before you can store any more. See "Deleting a Frequency from a Channel/Monitor Memory" below.

Direct Search

You can enter a frequency and search for transmissions above or below that frequency within the frequency bands. If you like you can then store a frequency into the scanner's monitor memory.

1. Press MANUAL or PGM.

2. Use the number keys to enter the frequency you want to start the search from. Press (.) to enter a decimal point.

Notes: If you want to start the search from a frequency already stored in one of your scanner's channels, press MANUAL or PGM, use the number keys to enter the channel number, then press MANUAL or PGM again.

If you enter an invalid frequency, the scanner displays Error. Simply repeat Step 2.

3. Press and hold down (/\) or (\/) for about 1 second to search up or down from the selected frequency. SEARCH (/\) or (\/), -d (direct), and a frequency appear on the display.

Note: If you entered an invalid frequency in Step 2 and the scanner displays Error, press CLEAR then repeat Steps 2 and 3.

4. When the scanner finds an active frequency, you can either:

Save the frequency into the monitor memory - press MON. MON appears on the display.

Continue searching - press and hold down (/\) or (\/) for about 1 second.

Walter,

3773. Good Scanner Deed

I found this in another scanning list:

14 Dec 2000 - a cold evening. (not positive on the date - I wrote down everything but the date - possibly the 13th). Around 2125 hours Arlington MA PD made a broadcast on BAPERN 3 (470.7875R the Metro Boston Area police mutual aid channel) that a 90 year old male was missing in East Arlington. So I switched on 471.1625R (the Arlington PD channel). At 2140, the dispatcher broadcast that the man was in front of the movie theater in East Arlington at (204 Mass Ave). Shortly thereafter a police unit reported that no one was there matching the description. The patrol supervisor sent 1 car to check the other movie theater in town. At 2142 the dispatcher said that the reported sighting had come from a person driving by in a automobile with a scanner. At 2148 the man was found nearby (at 180 Mass Ave) and returned to his home in East Arlington (off of 147 Mass Ave) without the need for medical attention. Peter S

3779. shielding antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-20 11:30:15 UTC
From: loriwlms@yahoo.com
Topic: 3779 Message: 3779

Hi,

Is it feasible to shield out signals from one direction? I have a non-directional antenna that is supposed to just be oriented vertically. From reading other posts, it looks like aluminum foil is one way to shield the antenna from signals. Any other ideas?

Thanks. LW

3780. Re: shielding antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-20 18:18:59 UTC
From: Ask Walter
Topic: 3779 Message: 3780

You may want to get a book on antennas before modifing the one you have, because shielding most antennas actually involve a modification to the antenna, not just adding to it.

But one way of semi-shielding, is to move about 18 inches away from the antenna, and use fine metal screen and it will change the direction at which it receives. It could also change for the worse and the screen would need be mounted without contacting your "radial" but only the grounded shield. Also, this will tremendously increase windload that can cause damage to your house or someone else's home.

I suggest, picking up a book, or just another antenna that is directional, and a swithcher, so you can select antennas with the push of a button or turn of a knob.

Walter

3781. Thanks for the replies & help...One more question!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-20 19:54:53 UTC
From: saltec1@yahoo.com
Topic: 3781 Message: 3781

Hi everyone,

Thanks for all of the replies. I ended up taking the scanner to Radio Shack and I bought the big book of frequencies. It turns out the scanner I bought (2nd hand from eBay, Radio Shack Pro 2014) only goes to around "500" frequency range and here in Topeka Kansas the police use the "800" range so I think I'll resell this one back on Ebay and look for one that will work. Any suggestions would be appreciated! I did figure out how to program it though there are a lot of things (buttons) I still don't quite understand...Can't wait to learn and get one that will work. I was very disappointed but hey, I should have done more research! Thanks again and I look forward to hearing from you about any suggestions on which one to buy!

Tecia

Yea, i was listening to that radio channel myself, BAPERN 3, as i am from the Boston area and usually monitor that channel, and heared the report of the missing man. Nice to know that people use their scanners for good and not for evil.

what really works good is simply,a bnc connector from radio shack,with any type of standard car ant,i prefer a steel whip,basic car ant.this will increase your lowband 39.00 to 49.oo mhz. range for at least 40 to 50 mile radius.the bnc adapter and ant is very inexpensive alternative to more expensive rooftop ant.both for under 20.00 dollars.

From: Bob - K8YS
Topic: 3784 Message: 3784

YES, you can "shield" an antenna from unwanted signals. The EASIEST way is with a directional antenna. Another way is to use a quarter wave stub, cut to the frequency (or as close as you can get.... for high band, cut the stub at about 18 inches of so... 468/f works). Using a bracket that is at the ground potential, mount your stub at the direction you want to shield. I forget the formula for the distance from the antenna, for some reason 1/4wave comes to mind, may be 1/8 wave. the idea is build an antenna with a deep nul. I would suggest looking at Phelps-Dodge's web site, or Celwave etc... maybe even a Direction Finders (DF'ers) site for ideas.

Bob

December 19, 2000

Congress Severely Curtails Plan for Low-Power Radio Stations
By STEPHEN LABATON
NY Times

WASHINGTON, Dec. 18 ☐ Tucked away in the budget legislation that President
Clinton will soon sign is a provision sought by the nation's largest broadcasters that sharply curtails the ambitious plans of the Federal Communications Commission to issue licenses for low-power FM radio stations
to 1,000 or more schools, churches and other small community organizations.

The provision, by setting new technical standards and repealing those already determined by the F.C.C., makes it all but impossible for licenses
to be issued in cities of even modest size. Officials say that the tough

standards will mean that at most a handful of stations in the least populated parts of the country may be started, although even that is now

uncertain.

Taking a direct slap at the regulators, the new law shifts the policy-making authority from the F.C.C. to Congress to set standards and issue licenses for low-power FM stations. This is the first time in recent memory
that the lawmakers actually stripped the agency of the power to manage an
important part of the spectrum.

The F.C.C.'s low-power radio plan was conceived last January to counter the
huge consolidation in the broadcasting industry that the agency's chairman,
William E. Kennard, concluded had led to a sharp decline in the diversity
of voices on the airwaves. Mr. Kennard saw the plan as a cornerstone of his

agenda to promote civil rights issues at the F.C.C.

Large broadcasters, including National Public Radio, had complained that

the creation of so many low- power stations would have produced interference with their broadcasts. The F.C.C. countered that the true concern of the broadcasters was new competition from small stations.

Today Mr. Kennard said the legislation "shows the dangers of politicizing
spectrum management."

"This is a resource that everyone has to share," Mr. Kennard said in an interview. "We can't allow people who have the spectrum to use their political clout to shut out voices that don't have the same clout. This highlights the power of incumbency. Companies that have spectrum guard it
jealously, and they can use Congress to prevent new voices from having access to the airwaves."

Known as the Radio Broadcasting Preservation Act of 2000, the law takes power away from the F.C.C. ☐ an independent regulatory agency ☐ to issue

important rules for licenses for FM radio stations and gives it to Congress, where the biggest broadcasters have considerably more influence.

If the agency wants to restore the low-power program to its original size,
the law instructs the regulators to conduct more studies of the effect of
the signals of low-power stations on larger radio stations and then come

back to Congress, which will now be the new rule-making body, to decide whether to issue more low- power radio station licenses.

The budget measure also contains a provision that effectively releases National Public Radio from offering free air time to political candidates.
A 1996 law had given the candidates free access, although it was only used
for the first time this year when some candidates noticed it. National Public Radio executives had feared that more candidates would demand air

time, particularly because radio stations that had denied the air time could have had their licenses revoked.

But a provision added to the budget legislation by Senator Ted Stevens, Republican of Alaska, with the support of Representative Billy Tauzin, Republican of Louisiana, says there is no penalty for any station that refuses to provide such air time. As a result, National Public Radio executives now think stations will be able to deny free air time to candidates without any consequences.

The provisions on political access and low-power radio demonstrate the emerging influence on Capitol Hill of National Public Radio, once considered an attractive political target of conservative Republicans but more recently an institution that held as much sway with the lawmakers as some of the leading for-profit broadcasters.

In the case of low-power radio, National Public Radio prevailed with the

assistance of the commercial broadcasters. A chief supporter of the provision to roll back the low- power radio plan was Senator Trent Lott of Mississippi, the majority leader, who is a friend of Edward O. Fritts, the president and chief executive of the National Association of Broadcasters, since their college days at the University of Mississippi.

The F.C.C. has received more than 1,200 applications from organizations in 20 states for low-power radio stations. Officials at the agency said today that, at best, a tiny fraction of those organizations would now be able to broadcast.

The White House had supported the F.C.C. plan and had criticized efforts to scale it back. In recent weeks, administration officials had been critical of the proposal that was put into the budget package.

But because the legislation is dominated by provisions and compromises that the president wanted, aides said the low-power radio provision was not enough to provoke a veto.

The measure will be signed by President Clinton just as the F.C.C. would

have issued its first batch of new licenses to schools and churches. Instead, F.C.C. officials today suggested wryly that the Congress had converted the plan into "our new rural program."

The nation's major broadcasters, joined by National Public Radio, had accused the F.C.C. of shoddy technical work and said the original plan would lead to tremendous amounts of signal interference that would have created poor reception for more established radio stations.

"Throughout the F.C.C.'s rule- making process to create a new low- power FM service, we have cited L.P. FM's potential interference to the services of

full-power stations, including vital radio reading services for the
blind,"
said a joint statement by Kevin Klose, president of National Public
Radio,
and Ben Martin, president of the International Association of Audio
Information Services. "This is the practical, rational way to achieve
the
laudable goal of compatibility between existing public radio stations
and
the new, low- power service."

Mr. Fritts of the National Association of Broadcasters said his
organization was "pleased that Congress has protected radio listeners
against additional interference that would have been caused by the
F.C.C.
low- power FM radio initiative."

But Mr. Kennard and his supporters at civil rights and community groups
countered that the broadcasters had thrown up a phony complaint. They
said
that their engineering tests determined conclusively that any signal
interference would be minimal at most and could be dealt with through
administrative proceedings and that the interference argument was
intended
to mask the larger broadcasters' real concerns about growing competition

for listeners.

Tecia, if I was looking for a scanner I think I would save my money a buy a new one. The only way I'd buy a used one is if I new the person first hand. Also don't just think about Radio Shack there sre some other fine companies that make scanners. Check out some bookstores for trade magzines and the such for info on the differant ones out there.

Tecia,

I suggest either buying Police Call from Radio Shack, or Monitor America from
any mail-order service related to radio.

also you could try www.perconcorp.com. this is a website where you can find
frequencies by city, county, business name, service, etc..

good luck

Pete

From: Chris Frederick
Topic: 3791 Message: 3791

Cruisin' the net last night found these under "HOSPITAL" searching.

www.bearcat1.com/radiomi.htm
www.911-emergency.com/radio_codes/michigan_police_fire_radio_codes.htm

Lots of duplication between these sites. On that first one, at
"radiomi" try substituting another state. i.e. "radioXX".
Same for the second site.
Have fun!!

Thanks for both responses. My antenna is in the attic which makes wind no problem. Someone said in a posting that foil from attic insulation can block signals. Would aluminum foil be better than metal screen?

Thanks, LW

3797. Re: [SST] Re: shielding antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-23 19:38:04 UTC
From: Bob - K8YS
Topic: 3785 Message: 3797

>Would aluminum foil be better than metal screen?

NO, the reason being is this, for you to NULL out an offending area, you need to adjust the pattern of the receiving antenna. To do this, you need to calculate the wave length of the band/frequency you are useing, and connect the stub at the antenna feed point. Imagine this, you have an antenna on a water tower, the antenna is mounted on the rail, the tank is behind you. Yes, you will have a null back there, but it will not exhibit the same pattern as a resonant stub. You would need a much larger surface of foil then you would need with the directing element.

From: fields larry
Topic: 3785 Message: 3798

this may not seem the same,but imagine having a radio
where theres alot of noise,and you go behind a
building,and the noise stops...
i have a shortwave radio here on the ship,and when i
walk behind the house of the ship<while using it at
night>it shields it from some of the intereference
from other sources..

3800. Merry Christmas

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-25 07:20:39 UTC
From: Ask Walter
Topic: 3800 Message: 3800

Hello All,
I am writing to wish you all a Merry Christmas !

I know I have all I need for the holiday season, a healthy family and a great new computer setup thanks to my wife and father-in-law.

I have fully recovered from my auto accident and will be available for questions through the board or at stupidscannertricks.com and click on the contact us link.

Also, I hope someone can give me a review on the win radio, I have seen some web pages on it, but not much as to how it was rated as far as operator freindly and that type of things.

I am working on a new page also, If there are search and rescue members or EMT's, firefighters or any other public safety members that wish to send true life stories, frequencies for your area (search and rescue related please) I will put them on the site and give credits on the page to the sender (your name or email or both if desired). If you would like to participate, email me at webmaster@...

Merry Christmas,
Walter

3802. FRS + GPS reporting

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-26 04:12:26 UTC
From: Ask Walter
Topic: 3802 Message: 3802

I do not know if any here is familiar with the new frs radios approved by the fcc. But they will be capable of sending locations to each other, this is handy for keeping track of the kids, also on SAR missions, it makes it much easier than direction finding to locate a lost hiker.
I personally got to see some specs, mind you they are still "trade secrets" but I work for a major communications company and these things are going to be dyno-mite.

I have no idea what the marketing peole are going to list the price for them or when they will be available, still pending final fcc approval. But I know I wil have a pair or more when they are ready.

Merry Christmas,
Walter

3803. Awsome Link

From: ROUTE SIXTYSIX
Topic: 3804 Message: 3804

I'm looking for Chicago area GMRS repeater freqs
including PL's. I checked Strong Signals,but I
couldn't come up with anything. Can anyone suggest
where I can get this info?
Thanks!
Steve

DEAR ASK WALTER
I AM HAVING TROUBLE GETTING SOME OF THE LOW BAND RECEPTION IN MY AREA. I READ SOMETHING ABOUT PUTTING A TV ANTENNA BETWEEN THE MAIN ANTENNA AND THE SCANNER. IF THIS IS THE WAY TO GO PLEASE GIVE ME SOME ADVICE ON THE MATERIALS AND THE SETUP. THANKS FOR YOUR HELP.

3807. Re: [SST] Can Someone PLEASE Help Me?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-27 13:08:30 UTC
From: fields larry
Topic: 3807 Message: 3807

Hello,Tecia, and welcome to the welcomed nosy
neighbor, I am larry<n6hpx> and I am replying from
overseas...I am currently attached to a U.S.Navy
tanker,and I read your letter with interest...
I carry many scanners myself,and I use em in my
travels..like here in singapore..where my ship is
undergoing repairs...
My present scanners I got from Radio shack as
well,and they were on sell..the pro 2042,2066,2067,and
pro 60,25 handhelds..these all pretty much carry the
800 mhz police bands..and they get good
coverage's,even at sea...imagine 10m fm dx down off
papua new guiea,and its coming from japan..the 2066
models can be run from 12 volt power supplies,and have
at least 150-100 channels..if you have a place for an
external antenna<and dont wanna put up a roof
mount>,try one of the magnetic mounts and mount it
outside on a railing or somewhere where it won't fall
over..if a handheld is desired..try the one's i
suggested or the new pro 92/94 models..
The problem with buying used gear is you usually get
some that are of no value or pure throw aways,that are
like what you got that can no longer receive the
police 800 mhz's..they can of course be used for
aircraft,or fire bands,or even local hams...
again welcome to the group,and good luck from
me..hope you find a good one...

3808. How's your setup?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-27 15:50:47 UTC
From: Larry
Topic: 3808 Message: 3808

Hello everyone,

I have a few questions that I would like to ask. It is my hope that it will spark some of the lurkers (myself included) to come out and join the folks that post regularly. I am on no less than 20 scanner mailing lists with a combined total of over 4000 members.. I have been on most of the lists for quite a some time, while others I just recently joined. For those of you on multiple lists, my apologies for the cross posting, however I would like to get as much input as possible, as we may find that someone out there has a better or more efficient way of doing something that will help us out.

I am not aware of the following questions (or answers) being posted to any of the lists or on any websites.

1. How is your scanner/s set up?

I use 2 scanners regularly. A pro 2035 with 10 banks that I have set up with one department for banks 1 - 4.
bank 1 police
bank 2 fire
bank 3 medical
bank 4 utilities (electric,gas,water companies)

I use banks 8-10 for the frequencies of the towns surrounding my area, including DPW, schools and local freqs.

The remaining banks I use to program in various frequencies found in books and the web in search of active frequencies.

The second scanner I use is a Pro 91 that I program depending on where I am working that day, or with the most active department for a major incident. i.e. the Fire Dept for a large fire, so that I can use the other scanner to monitor the other agencies, and surrounding towns.

2. How do you keep track of your frequencies? Do you use a spreadsheet application (Excel), have you created your own database, or is there another program available that you use?

I currently us Excel myself to keep track of the frequencies that I have programmed into my scanners (also marking which frequencies are active), however I am in the process of creating an MS Access database that will allow me to better manage the information that I gather, as well as match it up with the codes that the various agencies use in my area.

I have other questions to follow, waiting for some feedback on these two questions before posting them.

Thank you

Larry Morin
Scanning in New Jersey

.

TV antennas are multiband and multi frequencies and do
go as low as about 50 mhz,or where your channel 2 t.v.
starts out..they are also horizonal,as most
transmitters for lo-vhf are vertical...you can
probably mount it side ways,and use it that way..but
you may wanna look into a log periodic thats built
that way...it depends on how far you wanna listen..
i used the t.v. once for aircraft and from my home in
san fran.,i was able to pick up aircraft over the
sierra nevada mountains..
try it and see what happens..its part of the
hobby.see what works...

Steve,

I suggest trying www.perconcorp.com click on "free info". this will at least
tell you the frequencies, not PL's.

good luck

Pete

3815. Personal invite to all regarding scanning

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-29 22:30:18 UTC
From: RANDY LECLAIRE
Topic: 3815 Message: 3815

Sorry about the crossposting folks but I would like to
try and reach as many groups of people who enjoy
scanning. I would like to personally invite everyone
of you to try and put your cities scanners online..
Many of you obviously enjoy scanning so why not share
your cities with the rest of us.

You are welcome to join our egroup to learn how and
where to listen to scanners that are online as well as
broadcasting your own scanner online.

Go to http://www.egroups.com/group/livescanneraudio

Enjoy, and have a Happy Scanning New Year to all.

Randy

3816. Beginner Questions (Set 1)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-29 09:42:51 UTC
From: Larry
Topic: 3816 Message: 3816

Hello everyone, as promised here are additional questions (with more to follow).

I decided to start posting these questions because I like most beginners bought my scanners at radio shack. While they (Pro 2035, Pro 91 and Pro 2028) have performed flawlessly for what I have been using them for, I feel that in asking these beginner questions I will be able to make a better educated decision in purchasing my future scanners.

I sincerely hope that the more experience/knowledgeable people on the lists will answer these questions (in laymans terminology) for those of us who want to learn more and progress in the hobby.

Here is the first set of beginner questions.

What are:

CTCSS:

PL:

Why exactly would I want these features in my scanner?

What would I look for in a scanners specs to know that I am getting these features?

3817. Thank You (Beginner Questions)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-29 23:10:26 UTC
From: Larry
Topic: 3817 Message: 3817

I would like to send a sincere thanks to all of the people kind enough to reply to my beginner questions both to the list and my personal email. Before I continue with the questions I would like to introduce myself and explain my motivation for asking the beginner questions.

My name is Larry Morin and I live in Woodbridge, New Jersey. I have been monitoring for about 5 or 6 years now. My current arsenal is a Pro 2028, Pro 91 and a Pro 2035. Up until now I have been happy monitoring the local pd, fire and med channels. Recently I decided that I wanted to expand my knowledge of the scanning hobby. I do not personally know any other scannists in my area, as such the internet is my primary resource for scanning information.

I am currently subscribed to the following mailing lists. 4phun-radio,central-new-jersey-scanning, fedcom2000, livescanneraudio, MiddlesexCoNJTrunk, Njscanning, NJSPSCAN, NJ_scan, nnj-scan, RailScan, scan-l, scan4good, ScanCom, scanner, Scanner-Radio, scannernuts, stupidscannertricks and uscanningsgroup. Total membership of these groups is in excess of 4300 people. In addition I read alt.radio.scanner and rec.radio.scanner.

It occured to me that I am probably not the only person on these lists that wants to expand their knowledge of the hobby, yet does not know someone to ask personally. This is why I have started the beginner questions. If I ask a questions or two that helps someone with the hobby then I have accomplished what I set out to do. Some of the questions that I am going to ask, I will already know the answer (as was the case with the PL, CTCSS question, it took me a while to figure out they were the same thing.) In some cases I may just be looking for another way to do something to simplify the way I monitor (as was the case with the questions on your monitoring setup). Most of the questions I will not know the answer to and am looking for an answer.

I would like to request of the folks that decide to reply to my questions that you do not change the subject line and please post to the list. My reasoning is as follows.

For the people (if any) who decide that they don't want to receive the beginner questions and the replies, you can set up a filter in your mail program to delete messages with Beginner Questions in the subject line.

By posting your replies to the list the other beginners who are lurking out there will get the benefit of gaining some knowledge to help them progress in the hobby. I am saving all replies and may at some point in time compile the questions and answers into a web page of sorts. Not that I could compete with Dan's site http://www.webdeals.net/newusers.htm maybe just add a

little.

Thanks again & Happy New Year

Larry

3818. trick with RS Pro-60 scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-29 23:39:56 UTC
From: JEFFREY MICHAEL KENYON
Topic: 3818 Message: 3818

Hi all, I have been playing around with my old Radio Shack Pro-60 scanner, and I have noticed that some cell phones are coming in on 894 MHz when I have the radio in wide band mode. I don't listen to them really much, but I'm just wondering what is the last cell freq on 893 MHz? Is it something like 893.9875 or 893.9975? Also, some of the stuff on 900 MHz like the newer baby monitors and phones that are analogue are they using narrow or wide band FM? Any help would be appreciated, and thanks in advance.

3819. Re: [SST] Beginner Questions (Set 1)

> What are:
>
> CTCSS:
Continuous Tone Coded Squelch System. CTCSS is a sub audible tone superimposed on the transmitted carrier - used to activate (or DE-activate) a receiver or control a device. Tones are 67Hz to 250Hz and are NON-harmonically related...

CTCSS is used to allow more then one active system on the same channel and can also be used to block unwanted signals on the same channel (anti-PL). SOMETIMES it is mis-identified as a "closed system".

"Privacy codes" on the FRS radios (and older cordless phones) are CTCSS... nothing "PRIVATE" about the codes, just means that you won't open the squelch of another user that is using a different code.

CTCSS is used on systems to keep DX (skip) out of lowband VHF... some eastern cities do not care to listen to the LA county fire when the 10, up to about the 4 meter band is wide open.

CTCSS is why McDonalds resturaunts can share the same 154.600MHz channel with the Hardee's and the White Castles at the same interstate highway exit without getting the orders more messed up then they do.
>
> PL:
Same as CTCSS but is called Private Line by Motorola... Quiet Channel by GE

>
> Why exactly would I want these features in my scanner?

see above... if you are in Hamilton County Ohio, you may not care what is happening in Van Nuys.

>
> What would I look for in a scanners specs to know that I am getting these
> features?

Don't know much about the newer scanners.

Dear sir,

a CTCSS code is a special code programmed into radios to restrict
interference from other users on the same frequencies. Generally these are
used in more populated areas, or on shared repeaters.this is so users dont
confuse other conversations with their own. A PL is a trade-name, used by
Motorola, that is the same thing as CTCSS.

hope this helps.

good luck

Pete

From: Bob - K8YS
Topic: 3823 Message: 3823

is anyone using ANI to actuate a repeater receiver?? I understand the need to "ANI" the user (ANI = Automatic Number Identifier) == keeps the play babies at bay... as well as identifing a user in trouble.

For those not into TTFFLA's, DCS is Digital Coded Squelch
T2F2LA/TTFFLA = Two, Three, Four, Five Letter Acronym

3824. Outdoor antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-30 06:02:58 UTC
From: Doug Holloway
Topic: 3824 Message: 3824

I've been scanning for years but have always settled for the limited range of the standard Rad Shak $10 telescoping antennas. I have just bought a Uniden BC895XLT and would like to get the most out of it as I can afford. I need some advice on outdoor antennas, the Scantenna specifically. Grove Enterprises currently has these for $54.95, including shipping and coaxial cable. Is the Scantenna as good as the reviews say it is, and is the $54.95 package a good deal?

Hello Jeff, I carry mine on the ship as well,and I
pick up cell's in singapore about 932,and in P.I.
around 942..its a great one but I also listen to 220
mhz and will be scanning those next..73,larry

From: KCA6ABK@Webtv.net
Topic: 3829 Message: 3829

Hi!
I used a very similar anetenna for a while from RS. I was a little dissapointed with its sensitivity. I would say if you want to try it {you may have better luck in your area} that this deal from Grove sounds good. Usually the co-ax alone would run $20-$30.00. {At least at RS}.
I am using a now discontinued multi band mast mounted antenna which I am very happy with. I also understand that the discone antennas work very well. Good luck! And Happy New Year!

73s 2U! Scotty {KCA6ABK}

Visit Shortwave's Radio Page at:
http://home.talkcity.com/AntennaAv/Spacetracker/ShortwavesRadioPage.html

Yeah,
I like the discone, because you can tx on some bands there also. On 2 meter band openings , I talked to Mexico and Tampa , FL from Pensacola FL.

Walter

Let me tell you my favorite acronym story:

From the guidebook for AT&T employees..... D.N.A. was explained as 'Do Not Abbreviate'
Only at AT&T. Dilbert, take note.

is anyone using ANI to actuate a repeater receiver?? I understand the need
to "ANI" the user (ANI = Automatic Number Identifier) == keeps the play
babies at bay... as well as identifing a user in trouble.

For those not into TTFFLA's, DCS is Digital Coded Squelch
T2F2LA/TTFFLA = Two, Three, Four, Five Letter Acronym

From: fields larry
Topic: 3829 Message: 3831

Hello Doug, I haven't really used the antenna you
described but I have used the discones like the
daimond that radio shack uses..and they have great
ranges on em.
If you want long range,maybe the log periodics <like
a t.v. antenna on its side>might be the best offer as
they have various frequencies you can catch..these's
are quite useful for long range like 100 miles,but
they have there draw backs like wind problems...
So in any hobby of radio,give it a try,thats what
its all about...
have fun and good luck,
larry,n6hpx/du1 philippines

3832. Programming a Pro-64 by computer?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-31 06:06:25 UTC
From: scannerguy@hotmail.com
Topic: 3832 Message: 3832

This is what it said in my owners manual:
"CONNECTING A DATA LINK TO THE SCANNER

A data interface kit (not supplied) lets you program the scanner with frequencies stored in a computer program. Contact your local Radio Shack
store for more information."

The guys at my local Radio Shack had no idea how to get the interface kit. Looking at my scanner, there doesn't seem to be a way to connect an iterface kit. Is this a misprint, or is there really a kit to do this?

3850. Quick Fix?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-12-31 16:20:35 UTC
From: Andrew Perley
Topic: 3850 Message: 3850

I thought that i read somewhere about a quick fix to the handheld scanner.
I wanted to improve range. Any Ideas?

Andrew

one suggestion on the coax,which will cut db loss,use
the rg-59...i heard it has no db loss...larry
